Mathematics Education in East Africa Anjum Halai,Geoff Tennant,2016-03-08 This Open Access book is a valuable

resource for policymakers and practitioners as it brings insights mainly from developing countries where relatively less research activity takes place. It is also a valuable resource for courses in mathematics education in the teacher education colleges and departments of education in the sub-Saharan Africa region. In the increasingly global and technological world, mathematics is seen as a significant gatekeeper of opportunities for social and economic advancement and mobility. Hence, countries and development agencies in the broader sub-Saharan Africa region are looking towards increasing access to relevant and high quality secondary education as a lever towards economic development. Policy makers and other key decision makers in education look towards improvement in mathematics teaching and learning as a key focus in education reform. In the East Africa region also, a number of initiatives have been taken at the national level in the respective countries to improve the quality of mathematics education. This book provides an in-depth comparative analysis of the developments and issues in mathematics education in Kenya, Tanzania, Rwanda, and Uganda, and advances our understanding of the state of secondary mathematics education in East Africa.

Exploring Education at Postgraduate Level Anne O'Grady, Vanessa Cottle, 2015-09-25

There is a growing demand for educational professionals to develop a more critical understanding of the key and emerging debates in education so that they can better meet the challenges and demands placed upon them. *Exploring Education at Postgraduate Level* represents a range of perspectives from educational experts to academic researchers and highlights the key issues surrounding contemporary education. Organised into three parts and drawing on key issues in education theory, policy, and practice, the book considers areas such as SEN, evaluating learning, ESOL, and gender. Featuring reflective questions, case studies, and summaries of core ideas, the chapters include: Troublesome learning journey; Applying educational thinkers to contemporary educational practice; Values production through social and emotional learning; Policy research; In defence of ad hocery; We are all critically reflective now; The politics of critical reflection in higher education and in the work place; Developing critical thought about SEN; The refuge of relativism. Aimed at supporting students on Masters level courses, this accessible but critically provocative text is an essential resource for those wishing to develop a more critical understanding of the role, purpose, and function of educational systems and practices.

Mathematical Problem Solving Peter Liljedahl, Manuel Santos-Trigo, 2019-02-12

This book contributes to the field of mathematical problem solving by exploring current themes, trends, and research perspectives. It does so by addressing five broad and related dimensions: problem solving heuristics; problem solving and technology; inquiry and problem posing in mathematics education; assessment of and through problem solving; and the problem solving environment. Mathematical problem solving has long been recognized as an important aspect of mathematics teaching, mathematics and learning mathematics. It has influenced mathematics curricula around the world with calls for the teaching of problem solving as well as the teaching of mathematics through problem solving. And as such, it has been of interest to mathematics education researchers for as long as the field has existed. Research in this area has generally aimed at understanding and relating the

processes involved in solving problems to students development of mathematical knowledge and problem solving skills The accumulated knowledge and field developments have included conceptual frameworks for characterizing learners success in problem solving activities cognitive metacognitive social and affective analysis curriculum proposals and ways to promote problem solving approaches Science Outside the Laboratory Marcel Boumans,2015 Social science experiments often cannot be analyzed under controlled conditions as many take place outside a laboratory None the less measurement provides scientists with a sound basis for collecting and analyzing the results of field research Science Outside the Laboratory examines the relationship between measurement theory and field investigations through the philosophy of science

Morality and Epistemic Judgement Christopher Cowie,2019-10-23 Moral judgments attempt to describe a reality that does not exist so they are all false This is the moral error theory a deeply troubling yet plausible view that is now one of the canonical positions in moral philosophy The most compelling argument against it is the argument from analogy According to this the moral error theory should be rejected because it would seriously compromise our practice of making epistemic judgments judgments about how we ought to form and revise our beliefs in light of our evidence and could undermine systematic thought and reason themselves Christopher Cowie provides a novel assessment of the recent attention paid to this topic in moral philosophy and epistemology He reasons that the argument from analogy fails because moral judgments are unlike judgments about how we ought to form and revise our beliefs in light of our evidence On that basis a moral error theory does not compromise the practice of making epistemic judgments The moral error theory may be true after all Cowie concludes and if it is then we will simply have to live with its concerning consequences Creativity of an Aha! Moment and Mathematics Education ,2021-05-25 Creativity of an Aha Moment and Mathematics Education introduces bisociation the theory of Aha moment creativity into mathematics education It establishes relationships between Koestler s bisociation theory and constructivist learning theories It lays down the basis for a new theory integrating creativity with learning to describe moments of insight at different levels of student development The collection illuminates the creativity of the eureka experience in mathematics through different lenses of affect cognition and conation theory of attention and constructivist theories of learning neuroscience and computer creativity Since Aha is a common human experience the book proposes bisociation as the basis of creativity for all It discusses how to facilitate and assess Aha creativity in mathematics classrooms Contributors are William Baker Stephen Campbell Bronislaw Czarnocha Olen Dias Gerald Goldin Peter Liljedahl John Mason Benjamin Rott Edme Soho Hector Soto Hannes Stoppel David Tall Ron Tzur and Laurel Wolf **Creativity and Technology in Mathematics Education** Viktor Freiman,Janet Lynne Tassell,2018-09-03 This volume provides new insights on creativity while focusing on innovative methodological approaches in research and practice of integrating technological tools and environments in mathematics teaching and learning This work is being built on the discussions at the mini symposium on Creativity and Technology at the International Conference on Mathematical Creativity and Giftedness ICMCG in Denver USA

Translation Piotr Blumczynski, 2016-06-23 In this book Piotr Blumczynski explores the central role of translation as a key epistemological concept as well as a hermeneutic ethical linguistic and interpersonal practice His argument is three fold 1 that translation provides a basis for genuine exciting serious innovative and meaningful exchange between various areas of the humanities through both a concept the WHAT and a method the HOW 2 that in doing so it questions and challenges many of the traditional boundaries and offers a transdisciplinary epistemological paradigm leading to a new understanding of quality and thus also meaning truth and knowledge and 3 that translational phenomena are studied by a broad range of disciplines in the humanities including philosophy theology linguistics and anthropology using various often seemingly unrelated concepts which nevertheless display a considerable degree of qualitative proximity The common thread running through all these convictions and binding them together is the insistence that translational phenomena are ubiquitous Because of its unconventional and innovative approach this book will be of interest to translation studies scholars looking to situate their research within a broader transdisciplinary model as well as to students of translation programs and practicing translators who seek a fuller understanding of why and how translation matters *Everything, Briefly* Thomas O.
