No Stop City Archizoom Associati:

No-stop City Andrea Branzi, 2006 In 1969 the Archizoom group while carrying out an experimental work in the field of design also undertook a research on environment mass culture and the city which led to the project No Stop City Gathering all the texts and drawings this book reveals to us the Endless City intertwining architecture with objects and the triumphant consumer society giving an interpretation where the repetition of a single central element a building or a group of objects makes up through a play of mirrors a catatonic environment a boundless supermarket a now reached future to be composed No Stop City is a qualityless city in which the individual can achieve his own housing conditions as a creative freed and personal activity The theoretical project was first published in the review Casabella in 1970 under the title City assembly line of social issues ideology and theory of the metropolis As Andrea Branzi puts it this project implements the idea of the fading away of architecture within metropolis No Stop City is a critical Utopia a model of global urbanization where design is the essential conceptual instrument used in the mutation of living patterns and territories Archigram Simon Sadler, 2005-06-24 The first book length critical and historical account of an ultramodern architectural movement of the 1960s that advocated living equipment instead of buildings In the 1960s the architects of Britain s Archigram group and Archigram magazine turned away from conventional architecture to propose cities that move and houses worn like suits of clothes In drawings inspired by pop art and psychedelia architecture floated away tethered by wires gantries tubes and trucks In Archigram Architecture without Architecture Simon Sadler argues that Archigram s sense of fun takes its place beside the other cultural agitants of the 1960s originating attitudes and techniques that became standard for architects rethinking social space and building technology The Archigram style was assembled from the Apollo missions constructivism biology manufacturing electronics and popular culture inspiring an architectural movement High Tech and influencing the postmodern and deconstructivist trends of the late twentieth century Although most Archigram projects were at the limits of possibility and remained unbuilt the six architects at the center of the movement Warren Chalk Peter Cook Dennis Crompton David Greene Ron Herron and Michael Webb became a focal point for the architectural avant garde because they redefined the purpose of architecture Countering the habitual building practice of setting walls and spaces in place Archigram architects wanted to provide the equipment for amplified living and they welcomed any cultural rearrangements that would ensue Archigram Architecture without Architecture the first full length critical and historical account of the Archigram phenomenon traces Archigram from its rediscovery of early modernist verve through its courting of students to its ascent to international notoriety for advocating the disappearance of architecture The Possibility of an Absolute Architecture Pier Vittorio Aureli, 2011-02-11 Architectural form reconsidered in light of a unitary conception of architecture and the city In The Possibility of an Absolute Architecture Pier Vittorio Aureli proposes that a sharpened formal consciousness in architecture is a precondition for political cultural and social engagement with the city Aureli uses the term absolute not in the conventional

sense of pure but to denote something that is resolutely itself after being separated from its other In the pursuit of the possibility of an absolute architecture the other is the space of the city its extensive organization and its government Politics is agonism through separation and confrontation the very condition of architectural form is to separate and be separated Through its act of separation and being separated architecture reveals at once the essence of the city and the essence of itself as political form the city as the composition of separate parts Aureli revisits the work of four architects whose projects were advanced through the making of architectural form but whose concern was the city at large Andrea Palladio Giovanni Battista Piranesi tienne Louis Boull e and Oswald Mathias Ungers The work of these architects Aureli argues addressed the transformations of the modern city and its urban implications through the elaboration of specific and strategic architectural forms Their projects for the city do not take the form of an overall plan but are expressed as an archipelago of site specific interventions

The Project of Autonomy Pier Vittorio Aureli,2008-07-04 The Project of Autonomy radically rediscusses the concept of autonomy in politics and architecture by tracing a concise and polemical argument about its history in Italy in the 1960 s and early 1970 s Architect and educator Pier Vittorio Aureli analyzes the position of the Operaism movement formed by a group of intellectuals that produced a powerful and rigorous critique of capitalism and its intersections with two of the most radical architectural urban theories of the day Aldo Rossi s redefinition of the architecture of the city and Archizoom s No stop City Readers are introduced to major figures like Mario Tronti and Raniero Panzieri who have previously been little known in the English speaking world especially in an architectural context and to the political motivations behind the theories of Rossi and Archizoom The book draws on significant new source material including recent interviews by the author and untranslated documents PUBLISHER S WEBSITE

For Nature/With Nature: New Sustainable Design Scenarios Claudio Gambardella,2024-05-03 This volume contributes to the construction of a multi voice mosaic on the theme of Nature and the relationship between Man understood as designer and Nature by emphasizing the innovative and sustainable proposals coming from the discipline of design in its many facets and interdisciplinary contributions Since it isn t discussed the creative and economic effort that designers institutions and companies have been

leading for years to improve human living conditions preference will be given to scientific contributions unpublished or not yet fully known case studies projects of strategies products systems and services theoretical contributions communication that are an expression of a new approach to Nature seen as our ally and object of an ethics of care The focus is the design both in its role as innovation driver and interpreter of social evolution that must be considered within the human nature relationship The topics identify some of the most relevant fields of development in which Design Driven Innovation can be developed in the respect of perspective of a new relationship with nature *Analogical City* Cameron McEwan, 2024-01-18

In *Analogical City* Cameron McEwan argues for architecture's status as a critical project McEwan revisits architect Aldo Rossi as a paradigmatic figure of the critical rational tradition studying a neglected aspect of his thought the analogical city to excavate its potential McEwan develops a grammar of the analogical city under the headings of Imagination Transformation City Multitude and Project McEwan argues that the analogical city is critical collective and emancipatory Analogical thought and understanding cities as analogical might open the conditions of possibility for rethinking the critical project in architecture At a time when the humanities and the sciences are threatened by irrational thought from climate denial to post truth narratives and when architecture has seemingly disavowed its critical capacity and political possibility through its commodification as an instrument of the neoliberal city McEwan offers critical strategies conceptual tools figures of thought and knowledge practices to articulate modes of thinking and acting differently within architectural criticism and practice Today knowledge is a common terrain of struggle and thought requires constant reinvention The task of architecture and critique more broadly must be to interpret the world in order to change it Consequently *Analogical City* proposes modes for imagining the city the subject and the world otherwise towards a more egalitarian and critical architecture of the city Ultimately the analogical city is not a fully developed theory nor is it only an intuitive poetic or purely formal practice as some critics propose McEwan argues that the analogical city is poetic and political it always refers beyond itself towards a collective and critical project of the city and yet it invites a series of formal spatial and graphic operations comprising erasure and negativity followed by substitution and remontage

Spatial Concepts for Decolonizing the Americas Fernando Luiz Lara, Felipe Hernández, 2021-10-19 This collection of essays presents an innovative and provocative set of concepts to understand the spaces of the Americas through local lenses The disciplines of architecture urban design landscape and planning share the fundamental belief that space and place matter however the overwhelming majority of canonical knowledge in these fields originates in another continent and is external to the lived experience in such regions The book introduces seven new concepts that have not been sufficiently addressed and would make a significant contribution to the field namely gridded spaces spaces of agriculture space as image watered spaces spaces as labor racialized spaces and gendered spaces This book thus introduces a broader conceptual framework to foster the analysis of the spatial histories of the Americas

Planning Cities with Nature Fabiano Lemes de Oliveira, Ian Mell, 2019-02-02 This book explores novel

theories strategies and methods for re naturing cities It enables readers to learn from best practice and advances the current theoretical and empirical understanding in the field The book also offers valuable insights into how planners and policymakers can apply this knowledge to their own cities and regions exploring top down bottom up and mixed mechanisms for the systemic re naturing of planned and existing cities There is considerable interest in naturalising cities since it can help address multiple global societal challenges and generate various benefits such as the enhancement of health and well being sustainable urbanisation ecosystems and their services and resilience to climate change This can also translate into tangible economic benefits in terms of preventing health hazards positively affecting health related expenditure new job opportunities i e urban farming and the regeneration of urban areas There is thus a compelling case to investigate integrative approaches to urban and natural systems that can help cities address the social economic and environmental needs of a growing population How can we plan with nature What are the models and approaches that can be used to develop more sustainable cities that provide high quality urban green spaces [Post DomestiCity](#) Diego

Architecture Alex Lifschutz, 2018-02-05 Loose Fit Architecture Designing Buildings for Change September October 2017 Profile 249 Volume 87 No 5 ISBN 978 1119 152644 Guest Edited by Alex Lifschutz The idea that a building is finished or

complete on the day it opens its doors is hardwired into existing thinking about design planning and construction But this ignores the unprecedented rate of social and technological change A building only begins its life when the contractors leave With resources at a premium and a greater need for a sustainable use of building materials can we still afford to construct new housing or indeed any buildings that ignore the need for flexibility or the ability to evolve over time Our design culture needs to move beyond the idealisation of a creative individual designer generating highly specific forms with fixed uses The possibilities of adaptation and flexibility have often been overlooked but they create hugely exciting loose fit architectures that emancipate users to create their own versatile and vibrant environments Contributors include Stewart Brand Renee Chow Ellen Dunham Jones and June Williamson John Habraken Edwin Heathcote Despina Katsakakis Stephen Kendall Ian Lambot Giorgio Macchi Alexi Marmot Andrea Martin Kazunobu Minami Peter Murray Brett Steele and Simon Sturgis

Informality through Sustainability Antonino Di Raimo, Steffen Lehmann, Alessandro Melis, 2020-12-30 Informality through Sustainability explores the phenomenon of informality within urban settlements and aims to unravel the subtle links between informal settlements and sustainability Penetrating its global profile and considering urban informality through an understanding of local implications the authors collectively reveal specific correlations between sites and their local inhabitants The book opposes simplistic calls to legalise informal settlements or to view them as problems to be solved It comes at a time when common notions of informality are being increasingly challenged In 25 chapters the book presents contributions from well known scholars and practitioners whose theoretical or practical work addresses informality and sustainability at various levels from city planning and urban design to public space and architectural education Whilst previous studies on informal settlements have mainly focused on cases in developing countries approaching the topic through social cultural and material dimensions the book explores the concept across a range of contexts including former Communist countries and those in the so called Global North Contributions also explore understandings of informality at various scalar levels region precinct neighbourhood and individual building Thus this work helps reposition informality as a relational concept at various scales of urbanisation This book will be of great benefit to planners architects researchers and policymakers interested in the interplay between informality and sustainability
