What Mathematics Do Students Know and How is that Knowledge Changing? Peter Kloosterman, Doris Mohr, Crystal Walcott, 2015-09-01 This volume is intended for researchers curriculum developers policy makers and classroom teachers who want comprehensive information on what students at grades 4 8 and 12 the grades assessed by NAEP can and cannot do in mathematics After two introductory chapters on the design of NAEP the volume contains a chapter on the challenges in analyzing NAEP data at the item level followed by five chapters that report 2005 through 2013 student performance on specific assessment items These chapters are organized by content area and then by topic e g understanding of place value knowledge of transformations ability to use metric and U S systems of measurement and thus provide baseline data on the proportion of students who are able to complete the mathematics tasks currently used in the upper elementary middle and high school mathematics curriculum Additional chapters focus on student reasoning U S performance on international assessments and using construct analysis rather than percent correct on clusters of items to understand student knowledge on specific mathematics topics Several themes emerge from the volume One is that while the rate of improvement in mathematics learning in grades 4 and 8 has slowed in recent years it has slowed more on some topics than others Another is that relatively minor changes in wording can have significant effects on student performance and thus it is difficult to be specific about what students can do without knowing exactly what questions they were asked A third theme is that changes in performance over time can sometimes but not always be understood in terms of what students are taught For example there were substantial gains on several grade 4 items requiring understanding of fractions and that is probably because the amount of instruction on fractions in grades 3 and 4 has been increasing In contrast while relatively few twelfth grade students have ever been good at factoring trinomials performance on this skill seems to be decreasing This suggests that while more students are completing advanced mathematics courses in high school these courses are not helping in the area of factoring trinomials Finally there are limitations to using NAEP as a measure of student performance on the Common Core State Standards To the extent that NAEP can be used however the NAEP data show a substantial gap between expectations and performance

Mathematics framework for the 2003 National Assessment of Educational Progress [developed for the National Assessment Governing Board under contract number Rn91084001 by the College Board]. College Board, New York, Ny, 2002 This framework document describes the content and format of the National Assessment of Educational Progress naep mathematics assessments of 1996 2000 and 2003 Five content strands are discussed in the naep mathematics assessment 1 number sense properties and operations 2 measurement 3 geometry and spatial sense 4 data analysis statistics and probability and 5 algebra and functions The level of mathematical ability including conceptual understanding procedural knowledge and problem solving is regarded as playing a central role in defining item descriptors and achieving balance

across the tasks for each grade level in the naep mathematics assessment The framework reflects an integrated view of school mathematics Percentage of items allotted to each of the five strands families of tasks items to measure the depth of student knowledge in mathematics items requiring students to construct a response manipulative materials used to measure student knowledge and problem solving abilities and review for potential item bias are also discussed Khr
