Redesigning the Future of Education in the Light of New Theories, Teaching Methods, Learning, and Research ?enol Orakc?, 2024-04-01 Learning used to be confined to a physical place Now it s no longer limited by walls or daylight or location Learning happens in spaces that transcend these boundaries These spaces can still have physical elements but they are no longer defined by a physical footprint and constrained by the limitations of time space and matter Learning can now take place on any device in any place and at any time 21st century skills are one of the concepts we use most frequently when talking about innovative education We see that the skills referred to as 21st century skills include cognitive skills such as creative thinking problem solving as well as many different social and emotional skills such as understanding expressing empathy and teamwork Many educators now agree that not only academic knowledge is sufficient but social emotional skills play a role as much as academic knowledge in a person s success and happiness Another accepted fact is the phenomenon of lifelong learning the fact that education does not start at school but does not end at school in fact it is a process that should continue throughout life While accepting all this a subject that is not discussed much how this holistic lifelong learning is possible in a class in the form of 40 minutes lessons and 10 minutes of break While we are designing various kinds of education programs for children to gain all these different skill sets in the classroom do not we actually keep these skills in the easiest way practically away from the environments they will acquire In John Dewey s book Experience and Education 1938 information obtained as detached from real life is depicted as wasted time and effort Most teachers are already aware of this situation For this reason they try to explain math problems and literacy by linking them to children s experiences and lives as much as possible and they do many big and small experiments in social sciences and science lessons Can t we go one step further than this Can t we make learning in life a part of our education system instead of preparing small examples of real life for children With many justified concerns such as assessment security teachers pedagogical infrastructure we miss out on the most important opportunities for education just because they are outside the walls of the school This book aims to open new horizons in the journey of learning beyond the school walls in the world and
