

Sectors – ARC LENGTH Example 2

L = Length of Arc around Pizza

We only have 300° out of the full 360° of the circle.

This fraction is 300 / 360

The large remaining part of this circle is called a "MAJOR Sector".

All the way around a Circle is the "Circumference" of

$C = \pi \times R \times 2$ where $\pi = 3.1416$

$L = 300 / 360$ of a full circle

$L = 300/360 \times (\pi \times R \times 2)$

$L = 0.8333 \times (3.1416 \times 10 \times 2)$

$L = 52.4 \text{ cm}$ ✓

Teaching Mathematics Using Interactive Mapping Sandra L. Arlinghaus, Joseph J. Kerski, William C. Arlinghaus, 2023-12-11 Teaching Mathematics Using Interactive Mapping offers novel ways to learn basic math topics such as simple relational measures or measuring hierarchies through customized interactive mapping activities These activities focus on interactive web based Geographic Information System GIS and are relevant to today s problems and challenges Written in a guided hands on understandable manner all activities are designed to build practical and problem solving skills that rest on mathematical principles and move students from thinking about maps as references that focus solely on where is something to analytical tools focusing primarily on the whys of where Success with this transition through interaction permits most readers to master mathematical concepts and GIS tools

FEATURES Offers custom designed geographical activities to fit with specific mathematical topics Helps students become comfortable using mathematics in a variety of professions Provides an innovative engaging and practical set of activities to ease readers through typically difficult often elementary mathematical topics fractions the distributive law and much more Uses web based GIS maps apps and other tools and data that can be accessed on any device anywhere at any time requiring no prior GIS background Written by experienced teachers and researchers with lifelong experience in teaching mathematics geography and spatial analysis Features an accompanying Solution Guide available on the book s product page that is beneficial for instructors students and other readers as an aid to gauging progress This textbook applies to undergraduate and graduate students in universities and community colleges including those in basic mathematics courses as well as upper level undergraduate and graduate students taking courses in geographic information systems remote sensing photogrammetry geography geodesy information science engineering and geology Professionals interested in learning techniques and technologies for collecting analyzing managing processing and visualizing geospatial datasets will also benefit from this book as they refresh their knowledge in mathematics
