Mathematical Tools for Real-World Applications Alexandr Draganov, 2022-08-02 Techniques for applying mathematical concepts in the real world six rarely taught but crucial tools for analysis research and problem solving Many young graduates leave school with a solid knowledge of mathematical concepts but struggle to apply these concepts in practice Real scientific and engineering problems are different from those found in textbooks they are messier take longer to solve and standard solution recipes might not apply This book fills the gap between what is taught in the typical college curriculum and what a practicing engineer or scientist needs to know It presents six powerful tools for analysis research and problem solving in the real world dimensional analysis limiting cases symmetry scaling making order of magnitude estimates and the method of successive approximations The book does not focus on formulaic manipulations of equations but emphasizes analysis and explores connections between the equations and the application Each chapter introduces a set of ideas and techniques and then shows how these techniques apply to a series of problems Knowledge of algebra and trigonometry but not calculus is required The final two chapters tie all six techniques together and apply them to two real world problems computing the probability of a rare catastrophic event and tracking a satellite with a GPS receiver Readers will learn how to analyze dissect and gain insight into the results by using all the techniques presented in earlier chapters and discover how analysis tools work on problems not concocted for a textbook The appendix provides solutions to many of the problems found throughout the book Alexandr Draganov was born and raised in Kyiv Ukraine in light of the current war in Ukraine he will donate 100% of his royalties for the first year to support medical and humanitarian efforts there

Godwired Rachel Wagner, 2012-03-12 Godwired offers an engaging exploration of religious practice in the digital age It considers how virtual experiences like stories games and rituals are forms of world building or cosmos construction that serve as a means of making sense of our own world Such creative and interactive activity is arguably patently religious This book examines the nature of sacred space in virtual contexts technology as a vehicle for sacred texts who we are when we go online what rituals have in common with games and how they work online what happens to community when people worship online how religious worlds and virtual worlds nurture similar desires Rachel Wagner suggests that whilst our engagement with virtual reality can be viewed as a form of religious activity today's virtual religion marks a radical departure from traditional religious practice it is ephemeral transient rapid disposable hyper individualized hybrid and in an ongoing state of flux

E-math Iii Tm' 2007 Ed.(geometry) , Dynamic Locational Phases of Economic Activity in the Globalized World Toshiharu Ishikawa, 2016-03-11 This book clarifies the mechanisms of economic globalization in changing industries locations and shows how industries locations have changed through those mechanisms First the book deals with the retailing industry Introducing the concept of a contact price into the market area analysis it is shown in Part I that retailers market areas and prices are changed in different ways by a reduction of transportation costs The mechanism of these changes is explained by

checking the contact prices at apexes of the retailers market areas Then the book moves to the manufacturing industry and deals with a firm's production process Part II of the book shows the manner in which the production volume of factories within an agglomeration is decreased as the number of factories within the agglomeration increases Subsequently considering the fact that many production factories depart from agglomerations to other sites to reduce production costs a method of searching for a factory's new site is proposed in which a firm can seek out an optimal location of a factory in a short period of time By referring to a chaotic phenomenon a firm sets a location prospective area in a large geographical area and selects an optimal location within that area In the third part of the book the city system is the focus Part III elucidates the theoretical formation of a city system and analyzes structural changes of a city system due to a reduction of transportation costs The mechanism of the change is explained by a flexible market area theory which studies a city system by using the market areas established in the free entry equilibrium Then the economic relationships between the cities within a city system are examined from the point of view of the land rent in the cities areas This analysis shows the influences of a change in the largest city on other cities Finally the relationships between a city system and regional performance are examined using real data The examination shows that the city system reveals the regional performance

Cognitive Models of Science Ronald N. Giere, 1992 This work resulted from a workshop on the implications of the cognitive sciences for the philosophy of science held under the auspices of the Minnesota Center for Philosophy of Science The workshop's theme was that the cognitive sciences identified for the purposes of this project with three disciplinary clusters artificial intelligence cognitive psychology and cognitive neuroscience have reached sufficient maturity that they are now a valuable resource for philosophers of science who are developing general theories of science as a human activity The emergence of cognitive science has by no means escaped the notice of philosophers or philosophers of science Within the

philosophy of science one can detect an emerging speciality the philosophy of cognitive science which would be parallel to such specialities as the philosophy of physics or the philosophy of biology But the reverse is also happening That is the cognitive sciences are beginning to have a considerable impact on the content and methods of philosophy particularly the philosophy of language and the philosophy of mind but also on epistemology The underlying hope is that the cognitive sciences might now come to play the sort of role within the philosophy of science that formal logic played for logical empiricism or that history of science played for the historical school This development might permit the philosophy of science as a whole finally to move beyond the opposition between logical and historical approaches that has characterized the field since the 1960s Ronald N Giere is Professor of Philosophy and Director of the Minnesota Center for Philosophy of Science at the University of Minnesota
