Applied Biosecurity: Global Health, Biodefense, and Developing Technologies Ryan N. Burnette, 2021-05-31 This book describes an adaptable biothreat assessment process to complement overall biorisk management programs incorporating threat management and the unique natures of biological assets Further this book examines the nexus between public health international security and developing technologies building a case for augmenting biosecurity to levels beyond the laboratory constraints With the face of biological and biomedical sciences changing this book describes how with proper biosecurity development these can become assets rather than liabilities to secure our world from natural and man made biological disasters The world is changing rapidly with respect to developing threats such as terrorism and dual use technologies such as synthetic biology that are challenging how we think about biosafety and biosecurity

Further the fields of public health and international security are colliding as both of these share the common enemy intentional or natural biological incidents To date biosecurity has been limited to laboratory level application and complicating efforts and lacks credentialed biosecurity professionals skilled in both the biological sciences and threat management techniques The result is a fragmented field of practice with tremendous need from the lab to the outbreak Underpinning these principles is the SARS CoV 2 coronavirus pandemic providing a historic milestone to examine biosecurity through a global lens This book describes biosecurity as a set of practices and principles to be augmented out of the constrained laboratory environment and applied to larger efforts such as international threat reduction and biological incident management WHO Expert Committee on Biological Standardization WHO Expert Committee on Biological Standardization. Meeting,2013 This report presents the recommendations of a WHO Expert Committee commissioned to coordinate activities leading to the adoption of international recommendations for the production and control of vaccines and other biologicals and the establishment of international biological reference materials The report starts with a discussion of general issues brought to the attention of the Committee and provides information on the status and development of reference materials for various antibodies antigens blood products and related substances cytokines growth factors endocrinological substances and in vitro diagnostic devices The second part of the report of particular relevance to manufacturers and national regulatory authorities contains revised WHO recommendations for production and control of live attenuated influenza vaccines and for production and control of pneumococcal conjugate vaccines New WHO guidelines on the regulatory evaluation of similar biotherapeutic medicines are also provided Also included are a list of recommendations guidelines and other documents for biological substances used in medicine and of international standards and reference reagent for biological substances **Manual of Diagnostic Tests and Vaccines for Terrestrial Animals** ,2008
