Oil Cross Reference Guide Becker:

Mathematical Modeling of Fluid Flow and Heat Transfer in Petroleum Industries and Geothermal Applications Mehrdad Massoudi, 2020-04-16 Geothermal energy is the thermal energy generated and stored in the Earth's core mantle and crust. Geothermal technologies are used to generate electricity and to heat and cool buildings. To develop accurate models for heat and mass transfer applications involving fluid flow in geothermal applications or reservoir engineering and petroleum industries, a basic knowledge of the rheological and transport properties of the materials involved, drilling fluid, rock properties, etc., especially in high temperature and high pressure environments, are needed. This Special Issue considers all aspects of fluid flow and heat transfer in geothermal applications, including the ground heat exchanger, conduction and convection in porous media. The emphasis here is on mathematical and computational aspects of fluid flow in conventional and unconventional reservoirs, geothermal engineering, fluid flow and heat transfer in drilling engineering, and enhanced oil recovery, hydraulic fracturing, CO₂ injection, etc. applications. *Bio-Based Polymers for Engineered Green Materials*

Gianluca Tondi, Thomas Schnabel, 2020-05-20 With daily signals, Nature is communicating us that its unconscious, wicked exploitation is no more sustainable. Our socio-economic system focuses on production, increasing without considering the consequences. We are intoxicating ourselves on a daily basis just to allow the system to perpetuate itself. The time to switch into more natural solutions is come, and the scientific community is ready to offer more natural products with comparable performance than the market products we are used to deal with. This book collects a broad set of scientific examples in which research groups from all over the world aim to replace fossil fuel-based solutions with biomass-derived materials. In here, some of the most innovative developments in the field of bio-materials are reported, considering topics which go from biomass valorization to the synthesis of high performing bio-based materials. Copyright Entries, 1925-07 **In Vitro Digestibility in Animal Nutritional Studies** Pier Giorgio Peiretti, 2020-12-29 This book addresses various aspects of in vitro digestibility. Application of meta-analyses and machine learning methods to predict methane production. Methane production of sainfoin and alfalfa. In vitro evaluation of different dietary methane mitigation strategies. Rumen methanogenesis, rumen fermentation, and microbial community response. The role of condensed tannins in the in vitro rumen fermentation kinetics. Fermentation pattern of several carbohydrate sources. Additive synergistic or antagonistic effects of plant extracts. In vitro rumen degradation and fermentation characteristics of silage and hay. In vitro digestibility, in situ degradability, and rumen fermentation of camelina products. Ruminant fermentation parameters and microbial matters to odd and branched chain fatty acids. Comparison of fecal versus rumen inocula for the estimation of NDF digestibility. Rumen inoculum collected from cows at slaughter or from a continuous fermenter. Seaweeds as ingredients of ruminant diets. Rumen in vitro fermentation and in situ degradation kinetics of forage Brassica crops. In vitro digestibility and

rumen degradability of vetch varieties Intestinal digestibility in vitro of Vicia sativa varieties Ruminal in vitro protein degradation and apparent digestibility of Pisum sativum In vitro digestibility studies using equine fecal inoculum Effects of gas production recording system and pig fecal inoculum volume on kinetics In vitro methods of assessing protein quality for poultry and In vitro techniques using the DaisyII incubator **Catalog of Copyright Entries. Copyright Office,1926 *Hydrothermal Technology in Biomass Utilization & Conversion* David Chiaramonti,Andrea Kruse,Marco Klemm,2020-04-30 This book addresses a key innovative technology for decarbonization of the energy system hydrothermal processing It basically consists of treating biomass and wastes in a wet form under pressure and temperature condition This approach is becoming more and more attractive as new feedstock and applications are appearing on the scene of bioeconomy and bioenergy The hydrothermal processing of various type of biomass waste and residues thus raised the interest of many researchers and companies around the world together with downstream upgrading processes and technologies solid products as biochar for instance or liquid ones as crude bioliquids are finding new market opportunities in circular economy schemes The Special Issue collects recent innovative research works in the field from basic to applied research as well as pilot industrial applications demo It is a valuable set of references for those investing time and effort in research in the field **Chemical Additives for Improvement of Oil**

Spill Control United States. Coast Guard,1974 The Oil and Gas Journal ,1943 **Metabolic Syndrome** Isabelle Lemieux,Jean-Pierre Després,2021-01-28 Metabolic syndrome has been the topic of countless publications It still remains a subject of debate and some experts have even questioned its clinical relevance Its diagnosis is nevertheless predictive of an increased risk of type 2 diabetes and cardiovascular disease even in the absence of traditional risk factors Many years ago our team made the point that the most prevalent form of metabolic syndrome was linked to abdominal obesity which can be found even among individuals who are not considered obese by body weight standards Imaging techniques such as computed tomography and magnetic resonance imaging have revealed the link between regional body fat partitioning and cardiometabolic risk Visceral obesity is the most dangerous form of obesity with subcutaneous obesity being associated with lower health risk We have proposed that excess visceral fat may be a marker of subcutaneous adipose tissue dysfunction not being able to serve as a metabolic sink causing lipid accumulation at undesired sites a condition described as ectopic fat deposition Among the effective approaches to prevent delay or manage metabolic syndrome lifestyle changes are the key elements with an emphasis on the importance of healthy global dietary patterns regular physical activity and adequate sleep quality Underutilised Resources in Urban Environments Sigrid Kusch-Brandt,2020-06-18 This book is the result of a Special Issue of the journal Resources The Special Issue was initiated to identify promising solutions and specific challenges in the context of underused resources in urban environments Authors focus on two main areas the establishment of circular economy schemes based on valorizing wastes that occur in urban areas and the exploitation of renewable energies The

circular economy and renewable resources hold key potential for increasing the sustainability of cities and the presented studies enhance our understanding of how to unlock this potential Effective regulatory frameworks and policymaking processes that balance the power between stakeholders are required to successfully manage energy transition and the transition to more circular economies The positive role of community engagement merits high attention To recover valuable resources from household waste a focus on technology and infrastructure is required but is insufficient motivational factors and knowledge of citizens are the most essential elements The need to more reliably quantify and better characterize recyclable material streams also evidently remains especially where population numbers are further growing This book provides a rich source to explore promising solutions challenges and research needed for the sound management of resources in urban settings

Quantification and Mitigation Strategies to Reduce Greenhouse Gas Emissions from Livestock Production Systems Mizeck Chagunda, Peter Løvendahl, 2020-06-17 Ruminants contribute significantly to human food security However the production of ruminants contributes to greenhouse gas GHG emissions that are responsible for climate change GHGs such as methane carbon dioxide and nitrous oxide are produced from different processes of ruminant production Ruminant enteric methane is a substantial component of methane produced by agriculture This book presents novel and established methods in quantifying and reducing enteric methane emission from ruminants in different production systems The book covers different types of ruminants including cattle sheep and goats The chapters are contributed by scientists and authors from different parts of the world demonstrating the importance of this problem and the universal drive for immediate and sustainable solutions Although biologically speaking the production of enteric methane cannot be reduced to zero high emissions are an indicator of inefficient digestion of feed in the rumen and low utilisation of feed energy By presenting research that could lead to robust and yet practical quantification methods and mitigation strategies this book not only contributes to the discourse and new knowledge on the magnitude of the problem but also brings forward potential solutions in different livestock production systems

Petroleum Register, 1922 **Emerging Role of Lipids in Metabolism and Disease** Marco Segatto, Valentina Pallottini, 2021-04-01 Even though initially considered as a passive means for storing energy lipids are now regarded as multifaceted molecules with crucial structural and functional activities For instance some of them play essential roles as key components of cell membranes whereas others act as signaling molecules in the regulation of cell homeostasis In recent years lipid research has attracted increasing interest because of the involvement of this class of compounds in human health Indeed a plethora of pathological conditions are characterized by alterations in lipid metabolism such as cardiovascular diseases and brain disorders This Special Issue is a collection of papers from different experts in lipid research with the aim of providing new insights into the physiopathological involvement of lipids and their impact on human health This collection also demonstrates the usefulness of interdisciplinary approaches in the development of novel methods to study and manipulate lipid metabolism which may represent an attractive target for
