

What is Technical Writing?

Technical writing is the process of conveying information in a readable/understandable manner to a specific end user. Technical communicators write, design, and/or edit proposals, manuals, web pages, lab reports, newsletters, and many other kinds of professional documents.

While technical writers need to have good computer skills, they need not necessarily have to write about computers all their lives. "Technical" comes from the Greek *techné*, which simply means "skill".

For a large project, a technical writer may work with a graphic designer, an interface designer, several computer programmers, and a staff of freelance writers to design a huge web site. For a small project, or company, the tech writer may be expected to do all of the above, all alone.

The first rule of technical writing is "KNOW YOUR AUDIENCE." Writers who know their audiences well are in a position to suggest and implement solutions to problems that nobody else identifies. Whenever one group of people has specialized knowledge that another group does not share, the technical writer serves as a go-between. But technical writers are not just translators, accepting wisdom from experts and passing it on unquestioningly; they also are in the business of generating truth, by choosing what gets written, and for whom, with the full knowledge that later readers will depend on the accuracy of what has been written.

Good technical writers are also good trainers. They excel at explaining difficult concepts for readers who will have no time to read twice. Technical writers have an excellent eye for detail. They know punctuation, syntax, and style, and they can explain these rules to authors who need to know the changes required in the document.

Although they typically work on their own for much of the time, they also know how to coordinate the collaborative work of graphic artists, programmers, marketers, printers, webmasters, and the various "subject matter experts" (SMEs), who know all the answers but have never bothered to write them down anywhere.
