Oldest Part Of Ocean:

The Geology of the Atlantic Ocean Kenneth O. Emery, Elazar Uchupi, 2012-12-06 The explosion of interest effort and information about the ocean since about 1950 has produced many thousand scientific articles and many hundred books In fact the outpouring has been so large that authors have been unable to read much of what has been published so they have tended to concentrate their own work within smaller and smaller subfields of oceanography Summaries of information published in books have taken two main paths One is the grouping of separately authored chapters into symposia type books with their inevitable overlaps and gaps between chapters The other is production of lightly researched books containing drawings and tables from previous publications with due credit given but showing assembly line writing with little penetration of the unknown Only a few books have combined new and previous data and thoughts into new maps and syntheses that relate the contributions of observed biological chemical geological and physical processes to solve broad problems associated with the shape composition and history of the oceans Such a broad synthesis is the objective of this book in which we tried to bring together many of the pieces of research that were deemed to be of manageable size by their originators The composite may form a sort of plateau above which later studies can rise possibly benefited by our assembly of data in the form of new maps and figures

Geology and Landscapes of Scotland Con Gillen, 2013-07-25 A comprehensive treatment of the glorious geology and scenery of Scotland Profusely illustrated with photographs and maps this is the complete account for the many for whom the geology and scenery of Scotland are special

Ecosystems: Oceans Trevor Day, 2014-07-10 The oceans are teeming with life of all kinds Changing sea levels plate tectonics chemical cycling sedimentation and the atmosphere greatly impact these habitats The ocean's currents and sea level are tied closely to weather patterns and in turn to such issues as global warming and El Nino Oceans provides a complete overview of the ecosystem that exists in these bodies of water From the coastal wetlands to the deep ocean waters the geography geology chemistry and physics of oceans are thoroughly examined in this volume Today the impact that human use of ocean resources has on these habitats including habitat loss and overharvesting is in constant debate Oceans looks at these possible threats and concludes with a balanced look at the ways to manage the oceans as well as the future of this ecosystem

The Oceanic Lithosphere Cesare Emiliani, 2005-06

Geodynamics of the Lithosphere Kurt Stüwe, 2013-03-09 The large scale structure of the earth is caused by geodynamic processes which are explained using energetic kinematic and dynamic descriptions While geodynamic processes are understood to include a large variety of processes and the term is used by earth scientists quite loosely the methods of their description involve well

defined fields Energetic descriptions are involved with distribution of energy in our planet typically expressed in terms of heat and temperature Kinematic descriptions describe movements using velocities strains and strain rates and Dynamic descriptions indicate how stresses and forces behave As structural and metamorphic geologists we document in the field only the consequences of geological processes The underlying causes are much harder to constrain directly However it is absolutely crucial to understand these causes or driving forces if we are to explain the tectonic evolution of our planet This book deals with the dynamic description of geological processes Our descriptions relate causes and consequences tectonic processes with field observations In many cases we will use equations as a concise form to describe processes and observations in nature As we will be dealing mostly with large scale tectonic questions the observations that we shall use are also on a large scale For example we shall use observations on the elevation Fig 1 1 1 2 and heat flow of mountain ranges the thickness of continents and the water depth of the oceans

The United Nations Convention on the Law of the Sea, Part XI Regime and the International Seabed Authority: A Twenty-Five Year Journey Alfonso Ascencio-Herrera, Myron H. Nordquist, 2022-04-19 The United Nations Convention on the Law of the Sea Part XI Regime and the International Seabed Authority A Twenty Five Year Journey adopts a unique multidisciplinary approach by focusing on the legal scientific and economic perspectives of the United Nations Convention on the Law of the Sea and the Agreement relating to the Implementation of Part XI of the Convention Central to its theme is raising awareness of the important role of the International Seabed Authority and how much it has achieved over the last 25 years in creating a regime for deep seabed mining Through the rich and wide range of contributions readers will be able to draw interesting new insight into the Authority's evolutionary work as well as its legal framework
