*Manual of Intracytoplasmic Sperm Injection in Human Assisted Reproduction* Gianpiero D. Palermo, Zolt Peter Nagy, 2021-11-25 Not everything in medical science has a clear beginning The first realization of infertility and putative remedies remain shrouded in contextual history but likely goes back to the dawn of our species well before there was a written record Childlessness was and is still considered a burden in some communities

**Information Processing in Cells and Tissues** Michael Lones, Andy Tyrrell, Stephen Smith, Gary Fogel, 2015-09-02 This book constitutes the proceedings of the 10th International Conference on Information Processing in Cells and Tissues IPCAT 2015 held in San Diego CA USA in September 2015 The 19 papers presented in this volume were carefully reviewed and selected from 22 submissions They were organized in topical sections named biochemical information processing collective and distributed behavior patterning and rhythm generation biochemical regulatory networks metabolomics and phenotypes and neural modelling and neural networks

*Microfluidics* Sebastian Seiffert, Julian Thiele, 2019-12-02 Microfluidics introduces the theory and practice of fluid flow on small scales The exquisite control of such flow at low Reynolds numbers allows liquids to be processed in either a well defined co flow or a well defined segmented flow fashion Both lays a ground for high throughput analytics and advanced materials design With that this book is ideal for research scientists and Ph D students in the fields of chemistry chemical engineering biotechnology and materials science

Molecular Advances in Wheat and Barley Manuel Martinez, 2019-08-20 Allohexaploid bread wheat and diploid barley are two of the most cultivated crops in the world This book reports novel research and reviews concerning the use of modern technologies to understand the molecular bases for wheat and barley improvement The contributions published in this book illustrate research advances in wheat and barley knowledge using modern molecular techniques These molecular approaches cover genomic transcriptomic proteomic and phenomic levels together with new tools for gene identification and the

development of novel molecular markers Overall the contributions for this book lead to a further understanding of regulatory systems in order to improve wheat and barley performance      Intermediate Filament Mechanics Across Scales - From Single Filaments to Single Interactions and Networks in Cells Anna Veronika Schepers,2022 The mechanical properties of cells are largely determined by the cytoskeleton The cytoskeleton is an intricate and complex structure formed by protein filaments motor proteins and crosslinkers The three main types of protein filaments are microtubules actin filaments and intermediate filaments IFs Whereas the proteins that form microtubules and actin filaments are exceptionally conserved throughout cell types and organisms the family of IFs is diverse For example the IF protein vimentin is expressed in relatively motile fibroblasts and keratin IFs are found in epithelial cells This variety of IF proteins might therefore be linked to the various mechanical properties of different cell types In the scope of this thesis I combine studies of IF mechanics on different time scales and in systems of increasing complexity from single filaments to networks in cells This multiscale approach allows for the simplification necessary to interpret observations while adding increasing physiological context in subsequent experiments We especially focus on the tunability of the IF mechanics by environmental cues in these increasingly complex systems In a series of experiments including single filament elongation studies single filament stretching measurements with optical tweezers filament filament interaction measurements with four optical tweezers microrheology and isotropic cell stretching we characterize how electrostatic pH and ion concentration and hydrophobic interactions detergent provide various mechanisms by which the mechanics of the IF cytoskeleton can be tuned These studies reveal how small changes such as charge shifts influence IF mechanics on multiple scales In combination with simulations we determine the mechanisms by which charge shifts alter single vimentin filament mechanics and we extract energy landscapes for interactions between single filaments Such insights will provide a deeper understanding of the mechanisms by which cells can maintain their integrity and adapt to the mechanical requirements set by their environment      **Medicine And**

Measuring Biological Responses with Automated Microscopy ,2006-11-02 The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences      *Chromatin, Epigenetics and Plant Physiology* Jiří Fajkus,Miloslava Fojtová,2021-01-20 This eBook focuses on current progress in understanding the role of chromatin structure its modifications

and remodeling in developmental and physiological processes Eukaryotic genomes are packed into the supramolecular nucleoprotein structure of chromatin Therefore our understanding of processes such as DNA replication and repair transcription and cell differentiation requires an understanding of the structure and function of chromatin While the nucleotide sequence of the DNA component of chromatin constitutes the genetic material of the cell the other chromatin components and also modifications of bases in the DNA itself participate in so called epigenetic processes These processes are essential e g in ontogenesis or adaptation to environmental changes Therefore epigenetics is particularly important and elaborated in plants that show a high developmental plasticity and as sessile organisms display an enormous capacity to cope with environmental stress In these processes epigenetic mechanisms show a crosstalk with plant signaling pathways mediated by phytohormones and redox components You are welcome to read examples of current research and review articles in this hot research topic

The Second Life of Natural Killer (NK) Cells Chiara Romagnani,Joseph C. Sun,Marco Colonna,2018-07-16 Natural Killer NK cells are innate lymphocytes now recognized as members of a larger family of Innate lymphoid cells ILCs Both murine and human NK cells are well characterized effector cells with cytotoxic as well as cytokine production ability which mainly react in response to microbial and cell stress stimuli thus playing a central role in the defense against pathogen infection in tumor surveillance and in regulating immune homeostasis Despite these established concepts our understanding of the complexity of NK cells also in view of their developmental and functional relationship with other ILC subsets is only recently emerging This Research Topic highlights the recent advances in NK cell and ILC research in human and mouse from basic research to clinical applications

**ROS Regulation during Plant Abiotic Stress Responses** Zhulong Chan,Chun-Peng Song,Woe Yeon Kim,Ken Yokawa,2017-02-08 Plants are continuously exposed to a wide range of environmental conditions including cold drought salt heat which have major impact on plant growth and development To survive plants have evolved complex physiological and biochemical adaptations to cope

with a variety of adverse environmental stresses Among them reactive oxygen species ROS are key regulators and play pivotal roles during plant stress responses which are thought to function as early signals during plant abiotic stress responses ROS were long regarded as unwanted and toxic by products of physiological metabolism However ROS are now recognized as central players in the complex signaling network of cells Therefore a fine tuning control between ROS production and scavenging pathways is essential to maintain non toxic levels in planta under stressful conditions through enzymatic and non enzymatic antioxidant defense systems We focus on the roles of ROS during plant abiotic stress responses in this Research Topic Plant responses to multiple abiotic stresses and effects of hormones and chemicals on plant stress responses have been carefully studies Although functions of several stress responsive genes have been characterized and possible interactions between hormones and ROS are discussed future researches are needed to functionally characterize ROS regulatory and signaling transduction pathways
