Rat Diagram Labeled Of The Digestive System:

Cellular Basis of Chemical Messengers in the Digestive System Morton Grossman, 2012-12-02 Cellular Basis of Chemical Messengers in the Digestive System contains the proceedings of an international symposium on the cellular basis of chemical messengers of the digestive system held in Santa Monica California on January 16 17 and 18 1980 The papers explore the entire spectrum of problems related to the cellular aspects of chemical messengers in the digestive system with emphasis on which amines and peptides serve these functions and in which neurons and endocrine paracrine cells each kind of chemical messenger is found This book is comprised of 28 chapters divided into six sections and begins by considering the nature of gut peptides and their possible functions The discussion then turns to the diffuse neuroendocrine system and the phylogeny of the gastroenteropancreatic neuroendocrine system Methods such as immunocytochemistry electron immunohistochemistry and electron microscopy autoradiography are then described The following chapters focus on the function and morphology of endocrine paracrine cells immunochemical characterization of peptides in endocrine cells and nerves Langerhans islets as the neuro paraneuronal control center of the exocrine pancreas and regulation of metabolism by gastroenteropancreatic peptides The final section presents experimental results including in vitro studies of canine pseudo islets and of the mechanism of gastrin release This monograph will be of interest to physiologists and other practitioners in the field of medicine

Ultrastructure of the Digestive Tract P. Motta, H. Fujita, 2012-12-06 When established four years ago the scope of this international series in electron microscopy essentially was to provide an opportunity for the publication of selected review contributions by specialists in ultrastructural research Previous volumes presented over the last three years have focused on special topics of present interest in contemporary biomedicine such as endocrine cells reproduction and connective tissues In these fields in fact integrated methods of electron microscopy have contributed much to generate new ideas and concepts of general value in both basic and clinical applications The Ultrastructure of the Digestive Tract basically follows the same guidelines and style of the other books in the series and is an invited collection of selected contributions of authors from various laboratories active in the field of electron microscopy Therefore although the various chapters consist of individual topics they nevertheless should be considered as interrelated contributions of specific subjects in the field The idea was to have critical reviews of aspects previously published elsewhere by experts in the field who as a rule include other relevant information in their articles in order to update and enrich the subject This book contains fifteen chapters by renowned electron microscopists Each chapter according to the policy of the editors reviews a particular topic in great detail providing updated information study methods and results authors ideas on future investigative approaches and possible guidelines for forthcoming work We hope that this book will be useful to cell biologists morphologists physiologists and pathologists
