Draganov,2024-04-08 This book introduces readers to the art of doing mathematical proofs Proofs are the glue that holds mathematics together They make connections between math concepts and show why things work the way they do This book teaches the art of proofs using familiar high school concepts such as numbers polynomials functions and trigonometry It retells math as a story where the next chapter follows from the previous one Readers will see how various mathematical concepts are tied and will see that mathematics is not a pile of formulas and facts rather it has an orderly and beautiful edifice The author begins with basic rules of logic and then progresses through the topics already familiar to the students numbers inequalities functions polynomials exponents and trigonometric functions There are also beautiful proofs for conic sections sequences and Fibonacci numbers Each chapter has exercises for the reader Reviewer Comments I find the book very impressive The choice and sequence of topics is excellent and it is wonderful to have all of these things together in one volume Theorems are clearly stated and proofs are accurate Michael Comenetz The thoroughness of the narrative is one of the main strengths of the book The book provides a perfect illustration of mathematical thinking Each step of a given derivation is precise and clear Julie Gershunskaya Draganov s book stands out from the many competing books Draganov s goal is to show that mathematics depends on the notion of proof Unlike other transition books he addresses mathematical topics at an accessible level rather than topics studied later in the university curriculum Ken Rosen **College Algebra**

we need to appeal to shared social norms and sometimes where there is no ethical community we can appeal only to principles Ultimately Tunick rejects simplified arguments that force us to choose between either practices or principles universalism or relativism and liberalism or communitarianism
