Performance tasks are highly effective tools to assist you in implementing rigorous standards. But how do you create, evaluate, and use such tools? In this bestselling book, educational experts Charlotte Danielson and Elizabeth Marquez explain how to construct and apply performance tasks to gauge students' deeper understanding of mathematical concepts at the middle school level. You'll learn how to evaluate the quality of performance tasks, whether you've written them yourself or found them online. Use performance tasks for instructional decision making and to prepare students for summative assessments. Create your own performance tasks or adapt pre-made tasks to best suit students' needs. Teaching to the Math Common Core State Standards

F. D. Rivera, 2015-06-17. This is a methods book for preservice middle-level majors and beginning middle school teachers. It takes a very practical approach to learning to teach middle school mathematics in an emerging Age of the Common Core State Standards. The Common Core State Standards in Mathematics (CCSSM) is not meant to be the official mathematics curriculum; it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace. A quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the Grade 5 through Grade 8 and traditional pathway Algebra I portions of the CCSSM, first with issues in content practice, assessment, learning, teaching, and classroom management, pursued next, and in that order. In this book, we explore what it means to teach to the CCSSM within an alignment mindset involving content practice, learning, teaching, and assessment. The Common Core state content standards, which pertain to mathematical knowledge, skills, and applications, have been carefully crafted so that they are teachable.

learnable coherent fewer clearer and higher The practice standards which refer to institutionally valued mathematical actions processes and habits have been conceptualized in ways that will hopefully encourage all middle school students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation Thus in the CCSSM proficiency in content alone is not sufficient and so does practice without content which is limited Content and practice are both equally important and thus must come together in teaching learning and assessment in order to support authentic mathematical understanding This blended multisourced text is a getting smart book It prepares preservice middle level majors and beginning middle school teachers to work within the realities of accountable pedagogy and to develop a proactive disposition that is capable of supporting all middle school students in order for them to experience growth in mathematical understanding that is necessary for high school and beyond including future careers

U.S. Government Research Reports, 1962 **Cognitive and affective control** Gilles Pourtois, Wim Notebaert, Tom Verguts, Traditionally cognition and emotion are seen as separate domains that are independent at best and in competition at worst. The French scientist and philosopher Blaise Pascal 1623-1662 famously said *Le coeur a ses raisons que la raison ne connaît point*. The heart has its reasons that reason does not know. Over the last century however psychologists and neuroscientists have increasingly appreciated their very strong reciprocal connections and interactions. Initially this was demonstrated in cognitive functions such as attention, learning and memory and decision making. For instance an emotional stimulus captures attention e.g. Anderson, Verguts, Notebaert 2009. From this perspective cognitive control is not a cool, encapsulated executive function but instead involves rapidly calculating the value of situational contextual and action cues. Rushworth, Behrens 2008 for the purpose of adapting the cognitive system toward future optimal performance. A wide array of research has shed light on cognitive control and its interactions with affect or motivation. Behaviorally important phenomena include how people respond to difficult stimuli e.g. incongruent stimuli, task switches, negative feedback or errors and how this influences subsequent task processing. Neurally an important target structure has been the anterior cingulate cortex (ACC) and its connections to traditional emotional e.g. amygdala and cognitive areas e.g. pre-motor cortex, dorsolateral prefrontal cortex. ACC seems to play a predominant role in integrating distant effects from remote cognitive and emotion systems in order to guide and optimize behavior. The current special issue focuses on the bi-directional link between emotion and cognitive control. We invite studies that investigate the influence from emotion on cognitive control or vice versa, the influence of cognitive control on emotion. Contributions can be of different types. We welcome empirical contributions, behavioral or neuroscientific but also computational modeling theory or review papers. By bringing together researchers from the traditionally separated domains we hope to further stimulate the crosstalk between emotion and cognitive control and thus to deepen our understanding of both.
