Handheld and Ubiquitous Computing Hans-W. Gellersen, 2003-06-29 Truly personal handheld and wearable technologies should be small and unobtrusive and allow access to information and computing most of the time and in most circumstance Complimentary environment based technologies make artifacts of our surrounding world computationally accessible and facilitate use of everyday environments as a ubiquitous computing interface The International Symposium on Handheld and Ubiquitous Computing held for the first time in September 1999 was initiated to investigate links and synergies in these developments and to relate advances in personal technologies to those in environment based technologies The HUC 99 Symposium was organised by the University of Karlsruhe in particular by the Telecooperation Office TecO of the Institute for Telematics in close collaboration with ZKM Karlsruhe which generously hosted the event in its truly inspiring Center for Arts and Media Technology The symposium was supported by the Association of Computing Machinery ACM and the German Computer Society Gesellschaft f r Informatik GI and held in cooperation with a number of special interest groups of these scientific societies HUC 99 attracted a large number of paper submissions from which the international programme committee selected 23 high quality contributions for presentation at the symposium and for inclusion in these proceedings In addition posters were solicited to provide an outlet for novel ideas and late breaking results selected posters are also included with these proceedings The technical programme was further complemented by four invited keynote addresses and two panel sessions

An Introductory Guide to EC Competition Law and Practice Valentine Korah,1994

Contributions to on-board navigation on 1U CubeSats Weiß, Sascha,2022-04-07 This thesis investigates the use of GNSS receivers on 1U CubeSats using the example of BEESAT 4 and BEESAT 9 The integration of such a device on satellites enables highly precise time synchronization position acquisition and orbit determination and prediction The application fields that depend on an accurate attitude control and orbit determination system and can also be processed by CubeSats are highlighted Therefore the state of the art of GNSS receivers is described which are suitable for the use on satellites and could be integrated into 1U CubeSats Further on it is investigated which subsystems of a small satellite are particularly affected and what the special challenges are to realize a precise positioning with a GNSS receiver In addition some developments are presented that have significantly increased the performance of 1U CubeSats in recent years The system concept of BEESAT satellites is introduced and the evolution of the payload board including the use of the latest sensor technologies for attitude control is described It is shown how the verification of the satellite s subsystems was performed on the ground with the focus on testing and simulating the attitude

control and the GNSS receiver The necessary integration steps the calibration and environmental test campaign are discussed Both satellites were successfully operated and the results of the on orbit experiments are presented It is shown how a three axis stabilized attitude control was first verified on BEESAT 4 and then a GNSS receiver was successfully operated on BEESAT 9 for more than one year In addition the inter satellite link between BEESAT 4 and BIROS will be analyzed since it is essential for the relative navigation of satellites The acquired navigation data was sent to the ground and the identification of BEESAT 9 was carried out using this data A qualitative analysis of the orbital elements TLE of BEESAT 9 was performed systematically due to a daily operation of the GNSS receiver Furthermore it was investigated how a small GNSS antenna affects the received signal strength from GNSS satellites and whether this antenna or its amplifier degrades over time Additionally an orbit determination and propagation based on the navigation data could be performed and the results are evaluated The analyzed questions allow a statement about the continuous use of GNSS receivers on 1U CubeSats and if it is necessary to achieve the mission objectives Diese Arbeit untersucht den Einsatz von GNSS Empfängern auf 1U CubeSats am Beispiel von BEESAT 4 und BEESAT 9 Das Integrieren einer solchen Komponente auf Satelliten ermöglicht eine hochgenaue Zeitsynchronisation Positions und Orbitbestimmung sowie deren Vorhersage Es werden die Anwendungsfelder beleuchtet die auf ein akkurates Lageregelungs und Orbitbestimmungssystem angewiesen sind und außerdem auch von CubeSats bearbeitet werden können Dazu wird der Stand der Technik von GNSS Empfängern beschrieben die für den Einsatz auf Satelliten geeignet sind und von ihren Eigenschaften auch auf 1U CubeSats integriert werden können Weitergehend wird untersucht welche Subsysteme eines Kleinstsatelliten besonders betroffen sind und was die speziellen Herausforderungen sind um eine präzise Positionsbestimmung mithilfe eines GNSS Empfängers zu realisieren Dazu werden auch einige Entwicklungen vorgestellt die in den letzten Jahren die Leistungsfähigkeit von 1U CubeSats signifikant erhöht haben Das Systemkonzept der BEESAT Satelliten wird eingeführt und die Evolution der Nutzlastplatine inklusive der Verwendung der jeweils neuesten Sensortechnologien für die Lageregelung beschrieben Es wird gezeigt wie die Verifikation der Subsysteme des Satelliten am Boden erfolgte wobei der Fokus auf dem Testen und Simulieren der Lageregelung und dem GNSS Empfänger liegt Dazu werden die notwendigen Integrationsschritte die Kalibrations und die Umwelttestkampagne diskutiert Beide Satelliten wurden erfolgreich betrieben und die Ergebnisse der on orbit Experimente werden vorgestellt Es wird gezeigt wie zunächst eine dreiaachsenstabilisierte Lageregelung auf BEESAT 4 verifiziert und anschließend auf BEESAT 9 über mehr als ein Jahr ein GNSS Empfänger erfolgreich betrieben wurde Zusätzlich wird der Intersatelliten Link zwischen BEESAT 4 und BIROS analysiert da dieser für die Relativnavigation von Satelliten essentiell ist Die akquirierten Navigationsdaten wurden zum Boden gesendet und die Identifizierung von BEESAT 9 erfolgte mithilfe dieser Daten Eine qualitative Analyse der Orbitalelemente TLE von BEESAT 9 konnte systematisch durchgeführt werden durch einen typischen Einsatz des GNSS Empfängers Weiterhin wurde erforscht wie sich eine kleine GNSS Antenne auf die empfangenen Signale der GNSS Satelliten

auswirkt und ob diese Antenne oder ihr Verstärker mit der Zeit degradieren Zusätzlich konnte eine Orbitbestimmung und propagation auf Basis der Navigationsdaten durchgeführt und die Ergebnisse ausgewertet werden Die analysierten Fragestellungen erlauben eine Aussage über den durchgängigen Einsatz von GNSS Empfängern auf 1U CubeSats und ob dieser notwendig ist um die Missionsziele zu erreichen

Virtual Art Oliver Grau, 2004-09-17 An overview of the art historical

antecedents to virtual reality and the impact of virtual reality on contemporary conceptions of art Although many people view virtual reality as a totally new phenomenon it has its foundations in an unrecognized history of immersive images Indeed the search for illusionary visual space can be traced back to antiquity In this book Oliver Grau shows how virtual art fits into the art history of illusion and immersion He describes the metamorphosis of the concepts of art and the image and relates those concepts to interactive art interface design agents telepresence and image evolution Grau retells art history as media history helping us to understand the phenomenon of virtual reality beyond the hype Grau shows how each epoch used the technical means available to produce maximum illusion He discusses frescoes such as those in the Villa dei Misteri in Pompeii and the gardens of the Villa Livia near Prima Porta Renaissance and Baroque illusion spaces and panoramas which were the most developed form of illusion achieved through traditional methods of painting and the mass image medium before film Through

a detailed analysis of perhaps the most important German panorama Anton von Werner's 1883 The Battle of Sedan Grau shows how immersion produced emotional responses He traces immersive cinema through Cinerama Sensorama Expanded Cinema 3 D Omnimax and IMAX and the head mounted display with its military origins He also examines those characteristics of virtual reality that distinguish it from earlier forms of illusionary art His analysis draws on the work of contemporary artists and groups ART COM Maurice Benayoun Charlotte Davies Monika Fleischmann Ken Goldberg Agnes Hegedues Eduardo Kac Knowbotic Research Laurent Mignonneau Michael Naimark Simon Penny Daniela Plewe Paul Sermon Jeffrey Shaw Karl Sims Christa Sommerer and Wolfgang Strauss Grau offers not just a history of illusionary space but also a theoretical framework for analyzing its phenomenologies functions and strategies throughout history and into the future
