# An assessment system for rating scientific journals in the field of ergonomics and human factors

Jan Dul<sup>1</sup>, Waldemar Karwowski<sup>2</sup>

**Abstract:** A method for selecting and rating scientific and professional journals representing the discipline of ergonomics and human factors is proposed. The method is based upon the journal list, impact factors and citations provided by the Institute of Scientific Information (ISI), and the journal list published in the Ergonomics Abstracts. Three groups of journals were distinguished. The 'ergonomics journals' focus exclusively on ergonomics or human factors. The 'related journals' focus on other disciplines than ergo... [Show more](#)

**Problems of the High School Teacher** James Bartlett Edmonson, Raleigh Schorling, 1924      **Scientific Journals: Issues in Library Selection and Management** Tony Stankus, 2019-12-06 This book first published in 1987 brings together from a variety of sources analysis on the major issues involved in the collection of scientific journals Working from the premise that scientists tend to know much more about their subject than about their journals it examines the rationale for journal choices journals and tenure journals and budgeting and the elements of a good journal It shows librarians how to penetrate the internal structure of some imposing technical literatures in a way that can help them make responsible collection management decisions that even their science clientele will respect      **An ex-post impact assessment of IFPRI's GRP22 program, Water Research Allocation** Bennett, Jeffrey W., 2013-04-10 The performance of the International Food Policy Research Institute s IFPRI s research program that focuses on water resource issues is reviewed for the period 1994 2010 around the three themes that constitute the program global modeling river basin modeling and institutions The IFPRI water team has been involved in leading edge research in a number of dimensions it has focused on analysis at varying geographic scales the work has been truly interdisciplinary by engaging economics with biophysical science and other social sciences and research outputs have been innovative in advancing institutional analysis and water pricing and in policy measures addressing the complexities of water supply management In the research tasks IFPRI s water team actively collaborated with a wide range of researchers from within the CGIAR network national research institutes and universities Within the team a largely stable group of leaders has been responsible for the professional development of a substantial cohort of junior staff who have moved onto successful careers elsewhere The output of the program has been prolific and prominent in academic policy and development communities The approach taken is to review selected publications from the themes assess the quality of the journals in which papers have been published and evaluate the performance on average of researchers in the program In addition surveys of stakeholders were carried out and three specific projects were subjected to detailed review The assessment demonstrated the high regard in which the program research outputs and researchers are held The IFPRI water team has been remarkably productive throughout the 16 years considered working on issues that are of high relevance to policy and producing work that has largely been cutting edge However impacts generated by individual projects were not consistently or readily identifiable To maximize the benefits of this performance and to overcome challenges associated with securing more outcomes this report recommends that a more coordinated approach be taken to develop the research project portfolio This would involve better targeting of projects to policy objectives through a more systematic review of research demand forces and improved integration of research work with policy development processes The latter in particular requires the development of a sense of research project ownership within the policy circles the research is designed to influence More effort in the development of in country research

partnerships can aid this process as local researchers can act as champions within local policy circles Where government agencies have a research function their integration into the partnerships is recommended Avoidance of completing research projects in a policy vacuum is critical but requires both advanced planning of each research project as well as constant adaptation of the work plan to often rapidly evolving policy contexts To achieve project impacts beyond the immediacy of the specific case study context a more targeted and coordinated publication strategy should be developed in light of changing publication technology Project webpages within the IFPRI website with readily downloadable reports are useful during the implementation of each project and more formal papers should be targeted for publication in high impact factor technical journals with parallel papers prepared for more policy oriented journals that have high circulations Journal of the Optical Society of America and Review of Scientific Instruments ,1929 **ECKM 2021 22nd European Conference on**

**Program Evaluation** Apollo M. Nkwake,2012-08-30 A major reason complex programs are so difficult to evaluate is that the assumptions that inspire them are poorly articulated Stakeholders of such programs are often unclear about how the change process will unfold Thus it is so difficult to reasonably anticipate the early and midterm changes that need to happen in order for a longer term goal to be reached The lack of clarity about the mini steps that must be taken to reach a long term outcome not only makes the task of evaluating a complex initiative challenging but reduces the likelihood that all of the important factors related to the long term goal will be addressed Most of the resources that have attempted to address this dilemma have been popularized as theory of change or sometimes program theory approaches Although these approaches emphasize and elaborate the sequence of changes mini steps that lead to the long term goal of interest and the connections between program activities and outcomes that occur at each step of the way they do not do enough to clarify how program managers or evaluators should deal with assumptions Assumptions the glue that holds all the pieces together remain abstract and far from applicable In this book the author tackles this important assumptions theme head on covering a breadth of ground from the epistemology of development assumptions to the art of making logical assumptions as well as recognizing explicit zing

and testing assumptions with in an elaborate program theory from program design implementation monitoring and evaluation

**Peer review in scientific publications** Great Britain: Parliament: House of Commons: Science and Technology Committee,2011-07-28 This report indicates that the oversight of research integrity in the UK is unsatisfactory The Science and Technology Committee concludes that in order to allow others to repeat and build on experiments researchers should aim for the gold standard of making their data fully disclosed and made publicly available The report examines the current peer review system as used in scientific publications and the related issues of research impact data management publication ethics and research integrity The UK does not seem to have an oversight body for research integrity covering advice and assurance functions across all disciplines and the Committee recommends the creation of an external regulator It also says all UK research institutions should have a specific member of staff leading on research integrity The report highlights concerns about the use of journal Impact Factor as a proxy measure for the quality of research or of individual articles Innovative ways to improve current pre publication peer review practices are highlighted in the report including the use of pre print servers open peer review increased transparency and online repository style journals The growth of post publication peer review and commentary also represents an enormous opportunity for experimentation with new media and social networking tools which the Committee encourages There should also be greater recognition of the work sometimes considered to be a burden carried out by reviewers by both publishers and employers In order to do this publishers need to have in place systems for recording and acknowledging the contribution of those involved in peer review
