Handbook of Automotive Human Factors Motoyuki Akamatsu, 2019-06-14. Thanks to advances in computer technology in the last twenty years, navigation system, cabin environment control, ACC, advanced driver assistance system (ADAS), and automated driving have become a part of the automobile experience. Improvement in technology enables us to design these with greater flexibility and provide greater value to the driver, human-centered design. To achieve this, research is required by laboratories, automobile and auto parts manufacturers. Although there has been a lot of effort in human factors research and development starting from basic research to product development, the knowledge and experience has not been integrated optimally. The aim of this book is to collect and review the information for researchers, designers, and developers to learn and apply them for further research and development of human-centered design of future automotive technologies. Automotive human factors include psychological, physiological, mathematical, engineering, and even sociological aspects. This book offers valuable insights to applying the right approach in the right place.
