Advances in these areas have revolutionized design methods, codes of practice and the teaching of structural engineers. In this volume, an international body of leading authorities presents some forty papers on current research directions in the specific areas of solid mechanics, structural computation, modern materials and their application, buckling and instability, design of structural systems and components, reliability, seismic analysis and engineering education. They were presented at a symposium held July 10-12, 1994 at the University of Waterloo, Canada, to honour Professor Archibald Norbert Sherbourne, who recently retired from a long and active career of teaching, research and academic administration at this University. The themes of the work contained within this volume reflect Professor Sherbourne's own research interests and will be of interest to both academics and practicing structural engineers.
