Imagine that you are working with the following client in therapy

Mindy is a 10 year old Caucasian female (she is an only child). Her mom (single parent) brought her to therapy because she says Mindy has been having problems since the divorce of her parents (six months ago). Mindy is having the following symptoms and she is presenting with these symptoms in both school and at home. She is reportedly sad most days of the week. She reports feelings of hopelessness, helplessness, and often cries on and off during the week. She reports difficulty with attention and concentration, her grades are declining in math and science because she is not motivated to do her homework. She often isolates herself in her room and she refuses to help out with the chores. She reportedly plays on the internet for hours and texts her friends all night long. She reports she gets about 5 hours of sleep per night and she denied going for days without sleep. In the session she reports that she sometimes thinks about suicide but she clearly denied a plan. She makes statements like the following: "my life sucks, no one really cares about me, I'll never amount to anything."

Person's Centered Theory was developed by Carl Rogers who is known as a humanistic psychologist. He believed that clients possess the ability to heal themselves, and therapists serve as a tool to help clients access self-correction or creation. Rogers believed that humans are motivated by positive forces and that that is the nature of humans. In other words, humans have this innate tendency to develop or constrictive a healthy capacity.

A key method of Person's Center Theory is positive regard which is the need to receive warmth, accepting, acknowledgement, validation, respect from other people especially the people of significant in clients lives.

Terapeutisk allians och olika sätt att förmedla internetbehandling med KBT vid depression Kristofer Vernmark, 2018-12-12 Depression är en funktionsnedsättande problematik som påverkar en stor del av den vuxna populationen varje år. Trots ett omfattande behov av hjälp så råder det fortfarande tillgång till effektiv behandling. Kognitiv Beteendeterapi KBT är en evidensbaserad metod som har stått vid behandling av depression och förmedlad via internet skulle metoden kunna tillgängliggöras för fler. Dock är det idag svårt att få klart vilka format och vilket innehåll som kan användas när behandlingen förmedlas via internet samt vilken betydelse den terapeutiska alliansen har för en behandling som till största del sker på distans. Syftet med denna avhandling var att undersöka effekterna för olika format av internetbehandling epostterapi guidad självhjälp och blended treatment vid depression samt alliansens roll i dessa format. Studiernas resultat visar på att epostterapi och internetförmedlade självhjälpsprogram med behandlarstöd var effektiva metoder för att behandla depression. Alliansskattningar var höga vilket visar att en positiv terapeutisk allians kan uppnås i internetbehandling. Patientskattningar av allians kunde inte predicera utfallet i någon av behandlingarna men behandlarskattad allians predicerade förbättring vid depressionsskattningar i blended treatment. Den här avhandlingen innehåller den första randomiserade kontrollerade studien på KBT baserad epostterapi vid depression samt den första internetf
