Flow Control Through

Bio-inspired Leading-Edge Tubercles

Daniel T. H. New, Bing Feng Ng, 2020-01-31 This book describes and explains the basis of bio inspired leading edge tubercles based on humpback whale flippers as passive but effective flow control devices as well as providing a comprehensive practical guide in their applications It first discusses the morphology of the humpback whale flipper from a biological perspective before presenting detailed experimental and numerical findings from past investigations by various experts on the benefits of leading edge tubercles and their engineering implementations Leading edge tubercle designs and functions have attracted considerable interest from researchers in terms of understanding their role in the underwater agility of these whales and to exploit their flow dynamics in the development of new and novel engineering solutions Extensive research over the past recent years has demonstrated that the maneuverability of these whales is at least in part due to the leading edge tubercles acting as passive flow control devices to delay stall and increase lift in the post stall regime In addition to the inherent benefits in terms of aerodynamics and hydrodynamics investigations into leading edge tubercles have also broadened into areas of noise attenuation stability and industrial applications This book touches upon these areas with an emphasis upon the effects of lifting surface types flow regimes tubercle geometries lifting surface stability and potential industrial applications among others As such it features contributions from key experts in the fields of biology physics and engineering who have conducted significant studies into understanding the various aspects of leading edge tubercles Given the broad coverage and in depth analysis this book will benefit academic researchers practicing engineers and graduate students interested in tapping into such a unique but highly functional flow control strategy

Wind Energy - Impact of Turbulence Michael Hölling, Joachim Peinke, Stefan Ivanell, 2014-05-15 This book presents the

results of the seminar Wind Energy and the Impact of Turbulence on the Conversion Process which was supported from three societies namely the EUROMEch EAWC and ERCOFATC and took place in Oldenburg Germany in spring 2012 The seminar was one of the first scientific meetings devoted to the common topic of wind energy and basic turbulence The established community of researchers working on the challenging puzzle of turbulence for decades met the quite young community of researchers who face the upcoming challenges in the fast growing field of wind energy applications From the fluid mechanical point of view wind turbines are large machines operating in the fully turbulent atmospheric boundary layer In particular they are facing small scale turbulent inflow conditions It is one of the central puzzles in basic turbulence research to achieve a fundamental understanding of the peculiarities of small scale turbulence This book helps to better understand the resulting aerodynamics around the wind turbine s blades and the forces transmitted into the machinery in this context of puzzling inflow conditions This is a big challenge due to the multi scale properties of the incoming wind field ranging from local flow conditions on the profile up to the interaction of wake flows in wind farms
