Energetic Materials at Extreme Conditions David I.A. Millar,2011-09-24 David I A Millar s thesis explores the effects of extreme conditions on energetic materials His study identifies and structurally characterises new polymorphs obtained at high pressures and or temperatures The performance of energetic materials pyrotechnics propellants and explosives can depend on a number of factors including sensitivity to detonation detonation velocity and chemical and thermal stability Polymorphism and solid state phase transitions may therefore have significant consequences for the performance and safety of energetic materials In order to model the

behaviour of these important materials effectively under operational conditions it is essential to obtain detailed structural information at a range of temperatures and pressures **European Journal of Inorganic Chemistry** ,2003
