Wells, 2010-04-18 Until now there has been no single

comprehensive resource on the status of North America's most threatened birds and what people can do to help protect them. Birder's Conservation Handbook is the only book of its kind written specifically to help birders and researchers understand the threats while providing actions to protect birds and their habitats. Jeffrey Wells has distilled vast amounts of essential information into a single easy-to-use volume required reading for anyone who loves birds and wants to ensure they are protected. At a glance, species accounts cover in detail North America's one hundred most at risk birds; each account is beautifully illustrated by today's top bird artists. The text includes status, distribution, ecology, threats, conservation actions, and needs, and references. A distribution map accompanies each entry. Chapters discuss birds as indicators of environmental health, the state of North American bird populations, major conservation issues, and initiatives now underway to improve the health of North America's birds. Birder's Conservation Handbook is an indispensable resource for birdwatchers, researchers, naturalists, and conservationists. Reading it will inspire you to become an active steward of our birds and the habitats we share. A comprehensive guide to North America's one hundred most at risk birds and how to protect them. Compact and easy to use with beautiful illustrations and data organized for convenient at-a-glance reference. Detailed species accounts including distribution maps. Practical advice on conservation. Information on leading conservation agencies and resources.

Agriculture Handbook, 2006. *The Power of Existing Buildings* Robert Sroufe, Craig Stevenson, Beth Eckenrode, 2019-11-12. Your building has the potential to change the world. Existing buildings consume approximately 40 percent of the energy and emit nearly half of the carbon dioxide in the US each year. In recognition of the significant contribution of buildings to climate change, the idea of building green has become increasingly popular. But is it enough? If an energy-efficient building is new construction, it may take 10 to 80 years to overcome the climate change impacts of the building process. New buildings are sexy, but few realize the value in existing buildings and how easy it is to get to zero energy or low energy consumption through deep energy retrofits. Existing buildings can and should be retrofitted to reduce environmental impacts that contribute to climate change while improving human health and productivity for building occupants. In *The Power of Existing Buildings*, academic sustainability expert Robert Sroufe and construction and building experts Craig Stevenson and Beth Eckenrode explain how to realize the potential of existing buildings and make them perform like new. This step-by-step guide will help readers to understand where to start a project, develop financial models, and realize cost savings. Assemble an expert team and align goals with numerous sustainability programs. *The Power of Existing Buildings* will challenge you to rethink spaces where people work and play while

determining how existing buildings can save the world The insights and practical experience of Sroufe Stevenson and Eckenrode along with the project case study examples provide new insights on investing in existing buildings for building owners engineers occupants architects and real estate and construction professionals The Power of Existing Buildings helps decision makers move beyond incremental changes to holistic results oriented solutions *Target Value Delivery in Building Projects* Glenn Ballard, Peter Morris, 2025-04-25 This book presents the findings from recent research into practices and applications of Target Value Delivery that is setting budgets based on a building s functional requirements and steering the budgets through the design and construction process It demonstrates that budget setting can precede design solutions and provide tools to the design team to deliver the project vision with the available funds The authors lay out the processes involved in Target Value Delivery explore the history and present how different teams apply the principles in practice The book is intended as a practical guide for practitioners building owners designers contractors project managers and estimators and to provoke further study and development of the topic within the construction profession **A**
