

### 4.1.1 Cell structure, Prokaryotic cells

### Studying cells, Microscopy

**Light microscopes** use light and lenses to magnify. Individual cells can be seen, as well as large organelles e.g. Nucleus.  
**Electron microscopes** (transmission, scanning electron) use electrons, for a higher magnification and higher resolution.  
**Magnification calculation**  

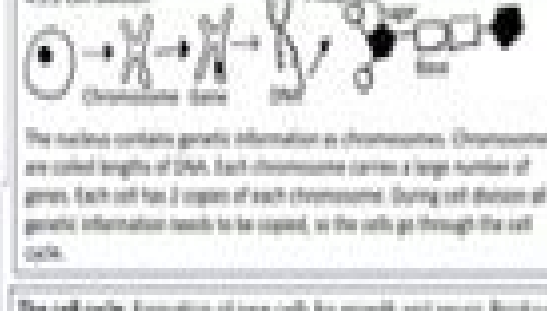

$$\text{Magnification} = \frac{\text{Image size}}{\text{Actual size}}$$

10 µm with a 100x magnification = 1000 µm or 1 mm = 1000

### Before Resolution: the ability to distinguish between two points which are close together (resolution)

**Before Magnification:** increasing the size of an object.  
**Viewing a specimen:** use a stain to provide contrast.  
**Staining a specimen:** Stains provide, bits of the space, for colouring or clearing, all from direct contrast, include magnification.  
 Size (µm) (e.g. 100µm, 1000µm, 10000µm, 100000µm)  
**Cell differentiation:** Cells specialise at an early stage of embryo development, by turning genes off and on.  
 Cells which are not specialised are called stem cells and they are found in early stage embryos and some fully developed organs.

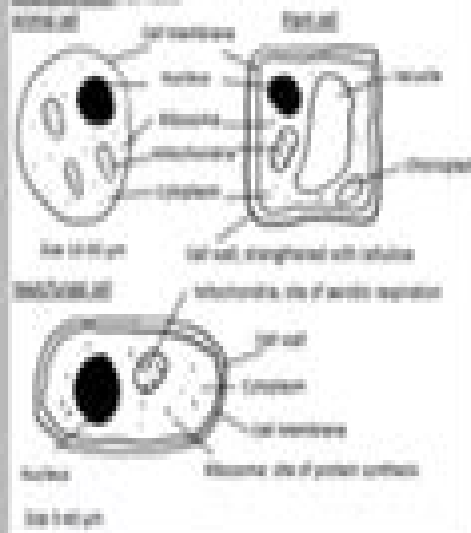

### 4.1.2 Cell division

### The cell cycle

### Specialised cells, Eukaryotic cells

### Specialised cells Biology Trilogy paper 1 Higher page 1

Cells	Name	Function	Adaptation
	Sperm cell	Fertilise the egg	Half the genetic info, lots of mitochondria to release energy
	Neuron	Carry electrical impulses	Long strand of cytoplasm, Branched to connect to other neurones
	Root hair cell (epidermal cell in a plant cell)	Take up water and mineral ions (Osmosis, diffusion and active transport)	Large surface area
	Muscle cell	Contract	Contains lots of mitochondria to release energy
	Xylem	Transport water and minerals up the plant	Dead, hollow tube, Transpiration stream
	Phloem	Transport sugars around the plant	Living, tubes joined end to end, Translocation

### The cell cycle, formation of new cells for growth and repair. Produces identical daughter cells with the same number of chromosomes. There are 3 stages: Growth and replication of organelles, Mitosis and cell division.

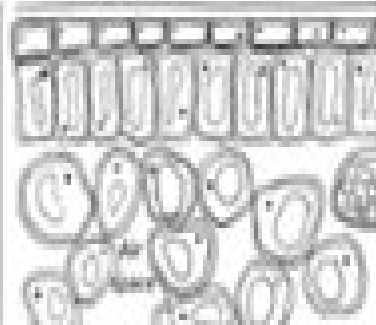

### 4.1.2 Transport in and out of cells

**Three methods of transport:**  
**Diffusion:** substances move from an area of high concentration to an area of low concentration. It is random and passive (does not require energy).  
 Occurs in the single layers moving from the lungs to the blood and carbon dioxide moving from the blood to the lungs, and in the movement of glucose moving from the blood to the muscle tissue.  
**Osmosis:** The movement of water from a region of high water concentration to a region of low water concentration, across a partially permeable membrane until equilibrium is reached.  
**Active transport:** The movement of a substance against a concentration gradient, from high to low. Requires energy and a carrier protein.

### Features of a good exchange surface:

- Good blood supply
  - Short diffusion pathways (cells close together)
  - Large surface area to volume ratio
  - Good ventilation (air or water flow)
  - Thin barrier (e.g. one cell thick)
  - Good blood supply (e.g. capillaries)
  - Moist
- Examples of exchange surfaces:**  
 Lungs, Fish gills, Small intestine (all increased by villi and microvilli)

### Leaf tissues and gases

- Water outside: water potential
- Upper epidermis: transparent
- Palisade mesophyll: layer contains chloroplasts for photosynthesis
- Spongy mesophyll: contains air spaces for gas exchange
- Guard cells: control opening and closing of the stoma
- Lower epidermis: contains guard cells

### Stem cells in plants

Found just below the tip of the shoot and roots. Undifferentiated cells which can become any type of cell. Adult stem cells found in most tissues. Can only differentiate into a few different types of cell.

### Stem cells in animals

Found in the bone marrow and in a very early stage of embryonic development. Can become any type of cell. Adult stem cells found in most tissues. Can only differentiate into a few different types of cell.

### 4.1.3 Leaf organisation

**Epidermis:** group of cells, building tissue. Specialise to give a particular function. Muscle cells contract and generate force.  
**Epidermis:** group of cells, building tissue. Specialise to give a particular function. Muscle cells contract and generate force.  
**Epidermis:** group of cells, building tissue. Specialise to give a particular function. Muscle cells contract and generate force.

**Spongy mesophyll:** contains air spaces for gas exchange.  
**Upper epidermis:** contains guard cells. Guard cells control the opening and closing of the stomata. The stomata are holes which control the movement of gases into and out of the leaf.
