Hoffman,2006-01-04 Machine intelligence will eclipse human intelligence within the next few decades extrapolating from Moore s Law and our world will enjoy limitless computational power and ubiquitous data networks Today s iPod devices portend an era when biology and information technology will fuse to create a human experience radically different from our own Already our healthcare system now appears on the verge of crisis accelerating change is part of the problem Each technological upgrade demands an investment of education and money and a costly infrastructure more quickly becomes obsolete Practitioners can be overloaded with complexity therapeutic options outcomes data procedural coding drug names

etc Furthermore an aging global population with a growing sense of entitlement demands that each medical breakthrough be immediately available for its benefit what appears in the morning paper is expected simultaneously in the doctor's office Meanwhile a third party payer system generates conflicting priorities for patient care and stockholder returns The result is a healthcare system stressed by scientific promise public expectation economic and regulatory constraints and human limitations Change is also proving beneficial of course Practitioners are empowered by better imaging methods more precise robotic tools greater realism in training simulators and more powerful intelligence networks The remarkable accomplishments of the IT industry and the Internet are trickling steadily into healthcare The Medicine Meets Virtual Reality series can readily see the progress of the past fourteen years more effective healthcare at a lower overall cost driven by cheaper and better computers

Yadav, Bharat B. Mittal, 2024-03-20 This book offers a detailed guide to MR Linac, a unique and fast-growing radiation treatment modality. MR linac is new technology that is a fusion of an MRI and a linear accelerator on the same gantry. It can change both target volume delineation and tumor visualization in real time using MR cine images and treatment. Tumor location changes moment to moment as radiation is delivered, but this cannot be visualized in current radiation therapy practices. This new and rapidly growing technology can provide adaptive therapy that was not possible before. This book presents current knowledge on MR linac technology, clinical practices, and ultimately patient outcome where dose escalation is not possible due to limiting normal tissue structures in the vicinity of tumor. There are two commercial MR linac machines under consideration, and both will be covered in detail. The book is divided into four sections. The first gives a general introduction to MR Linac, covering the role of MRI in radiation oncology, the clinical necessity of this technology, and patient selection. The next section details the physics and technology of MR Linac, covering image sequence, motion management, and treatment planning. Section three offers the clinical applications of MR Linac and is divided by body area, including lung, prostate, and breast. Finally, the fourth section looks to the future and what this technology can mean for radiation oncology. This is an ideal guide for radiation oncologists, medical physicists, and relevant trainees. **Breakthrough in**
