resources but a steady reduction in the richness of the indigenous biosystem By the late seventeenth century the country was well on the way to ecological disaster Yet Japan's isolation in the seventeenth and eighteenth centuries led to an unusually enlightened set of environmental policies and the system of regenerative forestry brought in during the Tokugawa period prevented certain devastation of the country's forests At the end of the nineteenth century however the country began to go to the opposite extreme as industrialisation brought with it a period of unprecedented change Growth and diversification led to a surge in environmental pollution as it became necessary to look beyond the country's domestic natural resources to meet the demand for foodstuffs fossil fuels and the raw materials necessary to an advanced industrial economy The population was particularly badly affected and some of the problems that emerged especially from the 1960s onwards provided important test cases not just for Japan but worldwide What makes the Japanese story particularly instructive is that the country's boundaries are uncommonly clear and the nature timing and extent of external influences on its history are unusually identifiable The Japanese experience therefore not only yields important insights into the processes of environmental history it offers important lessons for the wider environmental history of the planet and for our understanding of current global ecological problems A work of immense erudition and reflecting a lifetime of scholarship Japan an Environmental History will be welcomed by all with an interest in environmental history and the historical development of Japan Let's Go Outside! 200 Science Investigations for Young Students Martin Wenham,2000-12-13 This book enables teachers to develop a complete range of basic investigations for science with students aged five to 11 years It demonstrates how children can use hands on activities to consolidate and extend their knowledge and understanding Investigations are presented in a generic form so that teachers can work through them and adapt them to meet the particular needs of their own classes The presentation of activities ranges from highly

structured sequences of instructions and questions with answers to more general discussions depending on the approach needed and the likely variations in equipment and materials available Each activity is aimed to help any teacher carry out significant scientific investigations with their class and where necessary to learn alongside them Almost every investigation and activity has been tested by the author Investigations use readily available non specialist or recycled materials The context of this book is children s need to learn through first hand experience of the world around them This book is an essential resource for teachers planning an effective science programme or for student teachers needing to broaden their scientific knowledge and understanding 200 Science Investigations for Young Students is the companion volume of activities which demonstrate the theories in Martin Wenham s Understanding Primary Science The content has been guided by but not limited to The National Curriculum 2000 and the Initial Teacher Training Curriculum for Primary Science issued by the Teacher Training Agency

Transporters and Pumps in Plant Signaling Markus Geisler, Kees Venema, 2010-10-17 Due to their sessile lifestyle plants need to efficiently adapt to changing environmental conditions during their life cycle Nutrient acquisition from the soil has to be able to adapt to considerable fluctuations in concentrations to ensure adequate distribution between tissues cells and organelles The storage and retrieval of nutrients metabolites or toxic substances in vacuoles plays an important part in cellular homeostasis in plants The long range transport and maintenance of turgor is critically dependent on the availability of water and rate of evaporation while at the same time photosynthetic products have to be transported to all plant parts As a result plants contain a large number of ATP dependent pumps and secondary transporters that in order to adapt to the changing environment need to be regulated by a complex network of sensing and signaling mechanisms Plants share many basic elements of signal transduction with animals but also contain plant specific signaling molecules and mechanisms In this volume the role of transporters and pumps in the regulation of movement long range transport and compartmentalization of water solutes nutrients and classical signaling molecules is highlighted and the function regulation and membrane transporter interaction and their roles in plant signaling controlling plant physiology and development are discussed
