Structural Design for Fire Safety Andrew H. Buchanan, Anthony Kwabena Abu, 2017-01-30 Structural Design for Fire Safety 2nd edition. Andrew H. Buchanan, University of Canterbury, New Zealand; Anthony K. Abu, University of Canterbury, New Zealand. A practical and informative guide to structural fire engineering. This book presents a comprehensive overview of structural fire engineering. An update on the first edition, the book describes new developments in the past ten years, including advanced calculation methods and computer programs. Further additions include calculation methods for membrane action in floor slabs exposed to fires, a chapter on composite steel-concrete construction and case studies of structural collapses. The book begins with an introduction to fire safety in buildings, from fire growth and development to the devastating effects of severe fires on large building structures. Methods of calculating fire severity and fire resistance are then described in detail, together with both simple and advanced methods for assessing and designing for structural fire safety in buildings constructed from structural steel, reinforced concrete or structural timber. Structural Design for Fire Safety 2nd edition bridges the information gap between fire safety engineers, structural engineers and building officials, and it will be useful for many others, including architects, code writers, building designers and firefighters. Key features: Updated references to current research as well as new end-of-chapter questions and worked examples. Authors experienced in teaching, researching and applying structural fire engineering in real buildings. A focus on basic principles rather than specific building code requirements for an international audience. An essential guide for structural engineers who wish to improve their understanding of buildings exposed to severe fires and an ideal textbook for introductory or advanced courses in structural fire engineering.

*Polymer Green Flame Retardants* Constantine D. Papaspyrides, Pantelis Kiliaris, 2014-08-14 *Polymer Green Flame Retardants* covers key issues regarding the response of polymers during fire, the mechanisms of their flame retardation, the regulations imposed on their use, and the health hazards arising from their combustion. Presenting the latest research developments, the book focuses in particular on nanocomposites, believed to be the most promising approach for producing physically superior materials with low flammability and ecological impact. The fire properties of nanocomposites of various matrixes and fillers are discussed; the toxicological characteristics of these materials are analyzed, addressing also their environmental sustainability. Edited by distinguished scientists including an array of international industry and academia experts, this book will appeal to chemical, mechanical, environmental, material, and process engineers, upper level undergraduate and graduate students in these disciplines, and generally to researchers developing commercially attractive and environmentally friendly fire proof products. **Pedestrian and Evacuation Dynamics** Richard D. Peacock, Kuligowski Erica D., Jason D. Averill, 2011-06-29 An aging population, increasing obesity, and more people with mobility impairments are bringing new challenges to the management of routine and emergency people movement in many countries. These population challenges, coupled with the innovative designs being suggested for both the built environment and other commonly used structures (e.g., transportation systems) and the increasingly complex incident scenarios of fire, terrorism, and large scale community disasters, provide even greater challenges to population management and safety. *Pedestrian and Evacuation Dynamics*, an edited volume, is based on the Pedestrian and Evacuation Dynamics PED 5th International 2010 conference, March 8th-10th 2010, located at the National Institute of Standards and Technology, Gaithersburg, MD, USA. This volume addresses both pedestrian and evacuation dynamics and associated human behavior to provide answers for policy makers, designers, and emergency management to help solve real world problems in this rapidly developing field. Data collection, analysis, and model development of people movement and behavior during non-emergency and emergency situations will be covered as well.
