Foundations for the Future in Mathematics Education Richard A. Lesh, Eric Hamilton, James J. Kaput, 2020-10-07

The central question addressed in *Foundations for the Future in Mathematics Education* is this: What kind of understandings and abilities should be emphasized to decrease mismatches between the narrow band of mathematical understandings and abilities that are emphasized in mathematics classrooms and tests and those that are needed for success beyond school in the 21st century? This is an urgent question. In fields ranging from aeronautical engineering to agriculture and from biotechnologies to business administration, outside advisors to future-oriented university programs increasingly emphasize the fact that beyond school the nature of problem-solving activities has changed dramatically during the past twenty years as powerful tools for computation, conceptualization, and communication have led to fundamental changes in the levels and types of mathematical understandings and abilities that are needed for success in such fields. For K-12 students and teachers, questions about the changing nature of mathematics and mathematical thinking beyond school might be rephrased to ask: If the goal is to create a mathematics curriculum that will be adequate to prepare students for informed citizenship as well as preparing them for career opportunities in learning organizations in knowledge economies in an age of increasing globalization, how should traditional conceptions of the 3Rs be extended or reconceived? Overall, this book suggests that it is not enough to simply make incremental changes in the existing curriculum whose traditions developed out of the needs of industrial societies. The authors, beyond simply stating conclusions from their research, use results from it to describe promising directions for a research agenda related to this question. The volume is organized in three sections. Part I focuses on naturalistic observations aimed at clarifying what kind of mathematical thinking people really do when they are engaged in real-life problem-solving or decision-making situations beyond school. Part II shifts attention toward changes that have occurred in kinds of elementary but powerful mathematical concepts, topics, and tools that have evolved recently and that could replace past notions of basics by providing new foundations for the future. This section also initiates discussions about what it means to understand the preceding ideas and abilities. Part III extends these discussions about meaning and understanding and emphasizes teaching experiments aimed at investigating how instructional activities can be designed to facilitate the development of the preceding ideas and abilities. *Foundations for the Future in Mathematics Education* is an essential reference for researchers, curriculum developers, assessment experts, and teacher educators across the fields of mathematics and science education.

NAEP 1992 Mathematics State Report for New York

National Assessment of Educational Progress, Princeton, NJ., 1993

In 1990 the National Assessment of Educational Progress (NAEP) included a Trial State Assessment which for the first time in the NAEP's history made voluntary state-by-state assessments. This 1992 mathematics report marks the first attempt of the National Center for Education Statistics (NCES) to shift to standards-based reporting of National Assessment statistics. NAEP results are reported by achievement levels which

are descriptions of how students should perform relative to a body of content reflected in the NAEP frameworks in other words how much students should know The 1992 assessment covered six mathematics content areas 1 numbers and operations 2 measurement 3 geometry 4 data analysis statistics and probability 5 algebra and functions and 6 estimation In the District of Columbia 2 399 fourth grade students in 107 public schools and 1 816 eighth grade students in 35 public schools were assessed This report describes the mathematics performance of District of Columbia fourth and eighth grade students in public schools and compares their overall performance to students in the Northeast region of the United States and the nation The distribution of the results are provided for subpopulations of students including race ethnicity type of community advantaged disadvantaged urban extreme rural and other parents education level gender and content area performance To provide a context for understanding students mathematics proficiency students their mathematics teachers and principals completed questionnaires which focused on what are students taught curriculum coverage homework and instructional emphasis how is mathematics instruction delivered resources collaborating in small groups using mathematical objects and materials how are calculators and computers used access and use of calculators availability of computers and when to use a calculator who is teaching mathematics educational background and conditions beyond school that facilitate mathematics learning and teaching amount of reading materials in the home hours of television watched per day student absenteeism and students perceptions of mathematics The average proficiency of fourth grade students in District of Columbia on the NAEP mathematics scale was 191 compared to 217 nationwide for District of Columbia eighth grade students the average proficiency was 234 compared to 266 nationwide ASK Committee Meeting of Joint Committee on the Public Schools New Jersey.
