Mathematics of Digital Images S. G. Hoggar,2006-09-14 Compression, restoration, and recognition are three of the key components of digital imaging. The mathematics needed to understand and carry out all these components are explained here in a style that is at once rigorous and practical, with many worked examples, exercises with solutions, pseudocode, and sample calculations on images. The introduction lists fast tracks to special topics such as Principal Component Analysis and ways into and through the book, which abounds with illustrations. The first part describes plane geometry and pattern-generating symmetries, along with some on 3D rotation and reflection matrices. Subsequent chapters cover vectors, matrices, and probability. These are applied to simulation, Bayesian methods, Shannon's information theory, compression, filtering, and tomography. The book will be suited for advanced courses or for self-study. It will appeal to all those working in biomedical imaging and diagnosis, computer graphics, machine vision, remote sensing, image processing, and information theory and its applications.

Parallel Processing and Applied Mathematics Roman Wyrzykowski, Jack Dongarra, Marcin Paprzycki, Jerzy Wasniewski,2004-04-14 It is our pleasure to provide you with the volume containing the proceedings of the 5th International Conference on Parallel Processing and Applied Mathematics, which was held in Czestochowa, a Polish city famous for its Jasna Gora Monastery, on September 7-10, 2003. The first PPAM conference was held in 1994 and was organized by the Institute of Mathematics and Computer Science of the Czestochowa University of Technology in its hometown. The main idea behind the event was to provide a forum for researchers involved in applied and computational mathematics and parallel computing to exchange ideas in a relaxed atmosphere. Conference organizers hoped that this arrangement would result in cross-pollination and lead to successful research collaborations. In addition, they hoped that the initially mostly Polish conference would grow into an international event. The fact that these assumptions were correct was proven by the growth of the event. While the first

conference consisted of 41 presentations the conference reached 150 participants in Na l ecz ow in 2001 In this way the PPAM conference has become one of the premiere Polish conferences and de nitely the most important one in the area of parallel distributed computing and applied mathematics This year s meeting gathered almost 200 participants from 32 countries A strict refereeing process resulted in the acceptance of approximately 150 cont buted presentations while the rejection rate was approximately 33%
