

Plate Tectonics

Answer Key

Vocabulary: collisional boundary, convergent boundary, crust, divergent boundary, earthquake, lithosphere, mantle, plate, plate tectonics, subduction, transform boundary, volcano

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]

1. **Volcanoes** are openings in Earth's **crust** where lava, gas, and ash can erupt. Where are active volcanoes located?

Answers will vary. [Active volcanoes are located around the rim of the Pacific Ocean, and also in the Caribbean, southern Europe, Eastern Africa, Hawaii, and the Philippines.]

2. An **earthquake** is a violent shaking of Earth's surface. Where are earthquakes common?

Answers will vary. [Earthquakes are common in many of the same places as volcanoes, such as around the rim of the Pacific Ocean. Earthquakes are also common in South and Central Asia.]

Gizmo Warm-up

Volcanoes, earthquakes, mountains, and other features of Earth's surface owe their origin to the movements of **plates**: enormous, slowly-moving sections of Earth's crust. At plate boundaries, plates collide, move apart, move under or over each other, or slide past one another. The theory of **plate tectonics** describes how the plates move, interact, and change the physical landscape.

The Plate Tectonics Gizmo™ shows a cross-section, or side view, of Earth. (Not to scale.) Above the cross section is a bird's-eye view of the same location.

1. Turn on **Show labels**. What are the layers of Earth that you can see? *Continental crust, lithosphere, mantle.*

2. Turn on **Boundary name**, and click on each boundary. What four boundaries do you see?

Transform boundaries, convergent boundaries: collisional, convergent boundaries: subduction, and divergent boundaries
