## **Scorching Sun Shades** Glen

Earthsong, AI, 2025-02-27 *Scorching Sun Shades* explores how people have ingeniously adapted to desert environments by creating shade using readily available resources like cloth and rocks. It delves into traditional methods of mitigating the sun's intensity in desert mountain ecosystems, revealing how these practices represent sustainable and environmentally sound solutions. For instance, the book highlights how different rock types like sandstone and granite possess unique thermal properties that impact the shaded environment, influencing which materials are preferred in various regions. The book examines the geographical distribution of these shade-making practices, emphasizing the cultural importance of shade as social spaces reflecting community values. *Scorching Sun Shades* investigates the properties of cloth and rock, assessing their effectiveness in blocking solar radiation and providing ventilation. Did you know that these structures often carry spiritual meanings, adding another layer of significance to their function? The book's structure begins by introducing the challenges of desert landscapes and the principles of shade creation. It then progresses through the geographical distribution of these practices, the properties of materials used, and the cultural significance of shade. Finally, it discusses how these traditional methods can inform contemporary sustainable design, offering practical solutions for creating cooler and more livable spaces in hot climates.

## **Climate Adaptation for Architects**

Allison Anderson, 2025-09-16 *Architecture* must adapt to protect people from the threat of climate change. About half of the world's population lives in contexts that are highly vulnerable to climate change as hazards continue to intensify, with global disasters projected to reach 560 events per year by 2030 or 1.5 events every day. The accelerating frequency and intensity of disasters underscores the urgency to prepare for severe events to protect people, communities, and essential systems, but also to protect the environment, which provides shelter, livelihoods, cultural heritage, and public functions. This book provides a comprehensive reference of climate adaptation design tactics and a toolkit for adaptation to shocks and stresses, outlining the process for architects and designers to understand the risks posed by climate change to the built environment, reduce the risks to people and the built environment from natural hazards, reduce human vulnerability to shocks and stresses by strengthening resilience and adaptive capacity, design the built environment to adapt to changes over its lifetime, design buildings and cities to reduce dependence on fossil fuels, preserve biodiversity, and support natural resources. *Climate Adaptation for Architects* presents 45 adaptation tactics responding to the most consequential effects of climate change: heat, water, wind, and resource scarcity. Each chapter includes images, a definition, background information, key design considerations, potential impacts, and resources for further information. This is a valuable resource for every architect, landscape architect, urban planner, developer, and policymaker.

*Going to Zero* Pablo La Roche,2017-01-08 Typically architecture students are only introduced to energy modeling in elective graduate or advanced undergraduate seminars and when they are introduced to the design of zero net energy low carbon buildings it is only in upper division studios Because these

courses are typically not required only a small fraction of architecture students in some universities are actually able to take them This is not enough To reduce our impact on climate change we must introduce these concepts to ALL architecture students This book describes a project done in a required environmental controls course to introduce students to the design of zero net energy buildings using energy modeling Students first analyzed selected mid century buildings as they were originally designed many years ago comparing their performance with that of a California Energy Code compliant building Title 24 2013 and then made all necessary modifications to improve building performance beyond code and achieve a net zero energy building

Daylight, Design and Place-Making Hisham Elkadi,Sura Al-Maiyah,2020-12-20 Daylight Design and Place Making examines the role of daylight in creating and revealing the wonders of heritage and contemporary architecture Shifting from a purely technical approach to daylighting this book places importance on the creation of meaningful aesthetics through an understanding of context and culture Cultural applications of light in architecture differ depending on various historical technological and social characteristics Increasingly there is a revival of interest in contemporary architecture using daylight as an essential contextual ingredient in the design process By examining the architecture of daylight in different locales and setting these in their historical contexts the book argues that appropriate use of daylight will ensure not only visual and thermal comfort in the urban setting and aid in energy efficiency but also will contribute to the overall identity of new buildings particularly in urban regeneration projects This book brings together an analysis of technical aspects of daylight performance and environmental impact with discussions on the psychology of daylighting and its influence in shaping perceptions of our built environment It will be an ideal read for academics and researchers interested in architecture and cultural studies
