Abstract—Chronic inflammation is characterized by the presence of inflammatory cells, predominantly mononuclear cells, and increased levels of proinflammatory cytokines. Inflammation is a response to a variety of stimuli, including infection, injury, and stress. Inflammation is a complex process involving the interaction of many cells and molecules. The inflammatory response is a key component of the immune system and is essential for the body's defense against pathogens and injury. Chronic inflammation is a persistent inflammatory response that can lead to a variety of diseases, including cancer, heart disease, and autoimmune disorders. The underlying mechanisms of chronic inflammation are not fully understood, but it is thought to involve a dysregulation of the immune system. This review discusses the role of inflammation in disease and the potential for therapeutic interventions to modulate the inflammatory response.

INCIDENT RESPONSE AND ANALYSIS

• **Threat Intelligence** – info that can predict how threats operate
 • **Incident Response** – process to respond to an attack (e.g. detecting, investigating, eradicating, recovering, and improving)
 • **Incident Response Plan** – a plan that describes how an organization should respond to a security incident

Incident Response Process

1. Preparation
2. Detection and Analysis
3. Containment, Eradication, and Recovery
4. Post-Incident Activity

Incident Response Plan

- A document that describes how an organization should respond to a security incident
- It should be updated regularly to reflect changes in the organization's environment
- It should be tested regularly to ensure it is effective
- It should be approved by senior management

Incident Response Team (IRT)

- A team of individuals responsible for responding to security incidents
- It should be composed of individuals from different departments
- It should have a clear leader
- It should have a defined scope of responsibilities
- It should have a clear communication plan
- It should have a clear escalation process
- It should have a clear reporting process
- It should have a clear documentation process
- It should have a clear training process
- It should have a clear testing process
- It should have a clear review process
- It should have a clear improvement process

Incident Response and Analysis (IR&A)

- A process that involves detecting, analyzing, and responding to security incidents
- It is a critical part of an organization's security posture
- It requires a combination of technical and non-technical skills
- It requires a clear understanding of the organization's environment
- It requires a clear understanding of the threat landscape
- It requires a clear understanding of the organization's business objectives
- It requires a clear understanding of the organization's legal and regulatory requirements
- It requires a clear understanding of the organization's risk appetite
- It requires a clear understanding of the organization's culture
- It requires a clear understanding of the organization's resources
- It requires a clear understanding of the organization's capabilities
- It requires a clear understanding of the organization's limitations
- It requires a clear understanding of the organization's strengths
- It requires a clear understanding of the organization's weaknesses
- It requires a clear understanding of the organization's opportunities
- It requires a clear understanding of the organization's threats
- It requires a clear understanding of the organization's risks
- It requires a clear understanding of the organization's controls
- It requires a clear understanding of the organization's monitoring and logging capabilities
- It requires a clear understanding of the organization's incident response capabilities
- It requires a clear understanding of the organization's recovery capabilities
- It requires a clear understanding of the organization's post-incident activity capabilities
- It requires a clear understanding of the organization's threat intelligence capabilities
- It requires a clear understanding of the organization's threat hunting capabilities
- It requires a clear understanding of the organization's threat detection capabilities
- It requires a clear understanding of the organization's threat analysis capabilities
- It requires a clear understanding of the organization's threat response capabilities
- It requires a clear understanding of the organization's threat containment capabilities
- It requires a clear understanding of the organization's threat eradication capabilities
- It requires a clear understanding of the organization's threat recovery capabilities
- It requires a clear understanding of the organization's threat post-incident activity capabilities

Thermodynamic state functions (2nd 12 week 40)

1. **Internal energy** is a thermodynamic state function. It is the sum of the kinetic and potential energies of the particles in a system. It is a scalar quantity and is denoted by U . It is a property of the system and is independent of the path taken to reach the state. It is a function of the state variables, such as temperature, pressure, and volume. It is a conserved quantity, meaning that the total internal energy of an isolated system remains constant.

2. **Enthalpy** is a thermodynamic state function. It is the sum of the internal energy and the product of the pressure and volume. It is a scalar quantity and is denoted by H . It is a property of the system and is independent of the path taken to reach the state. It is a function of the state variables, such as temperature, pressure, and volume. It is a conserved quantity, meaning that the total enthalpy of an isolated system remains constant.

3. **Entropy** is a thermodynamic state function. It is a measure of the disorder or randomness of a system. It is a scalar quantity and is denoted by S . It is a property of the system and is independent of the path taken to reach the state. It is a function of the state variables, such as temperature, pressure, and volume. It is a conserved quantity, meaning that the total entropy of an isolated system remains constant.

4. **Gibbs free energy** is a thermodynamic state function. It is the sum of the enthalpy and the product of the temperature and entropy. It is a scalar quantity and is denoted by G . It is a property of the system and is independent of the path taken to reach the state. It is a function of the state variables, such as temperature, pressure, and volume. It is a conserved quantity, meaning that the total Gibbs free energy of an isolated system remains constant.

5. **Helmholtz free energy** is a thermodynamic state function. It is the sum of the internal energy and the product of the temperature and entropy. It is a scalar quantity and is denoted by A . It is a property of the system and is independent of the path taken to reach the state. It is a function of the state variables, such as temperature, pressure, and volume. It is a conserved quantity, meaning that the total Helmholtz free energy of an isolated system remains constant.

6. **Chemical potential** is a thermodynamic state function. It is a measure of the change in internal energy of a system when a particle is added or removed. It is a scalar quantity and is denoted by μ . It is a property of the system and is independent of the path taken to reach the state. It is a function of the state variables, such as temperature, pressure, and volume. It is a conserved quantity, meaning that the total chemical potential of an isolated system remains constant.
