equations and the convexity condition of the cost functional Surprisingly the adjoint equations involve some coupled partial differential equations which is significantly different from that in the literature where the adjoint equations are all some anticipated backward ordinary differential equations The closed loop solvability is characterized by the solvability of three equivalent integral operator valued Riccati equations and two equivalent backward integral evolution equations which are much easier to handle than the differential operator valued Riccati equations used in the literature to study similar problems The closed loop representation of open loop optimal control is presented through three equivalent integral operator valued Riccati equations     *Mathematical Reviews* ,2005     **Applied Mechanics Reviews** ,1973     **Referativnyi zhurnal** ,1986
