Srivastava,Ahmed Abdul Quadeer,2025-07-30 At the time of writing this call for papers for the special issue Changes in T cell populations and cytokine production in SARS CoV 2 infected individuals their role in prognosis June

10 2022 over 534 million people have been infected with SARS CoV 2 virus of whom over 6 3 million have died Early studies of COVID 19 reported that infection with SARS CoV 2 results in dysregulation of the immune and hematopoietic systems manifested by lymphopenia increased numbers of hyperactivated neutrophils and NK cells and the development of tolerogenic APCs that suppress T cell mediated immunity In patients with COVID 19 lymphopenia mainly due to depletion of effector T cells with a concomitant decrease in regulatory T cells Tregs accompanied by significant upregulation of cytokines IL 1 IL 6 TNF IL 10 and chemokines MCP1 IP 10 MIP1A MIP1B have been associated with a poor outcome The continued evolution of SARS CoV 2 including the rapid accumulation of viral mutations to the point that new viral variants with different characteristics are emerging has led to great concern about the ability of these variants to evade the immune response triggered by natural infection and or vaccination The recent wave of infection has been caused by the omicron variant B 1 1 529 which has 5 sublineages BA 1 5 that differ in the number of mutations in the spike protein and by the emerging deltacron variant which resulted from recombination of the omicron with the delta B 1 617 2 variant The rapid international spread of emerging variants with mutations associated with escape from vaccine induced immunity poses a major challenge for pandemic control and prevention of COVID 19 Important questions have been raised about the impact of SARS CoV 2 variants on transmissibility disease severity the effectiveness of existing COVID 19 vaccines in preventing severe disease humoral response and the role of T cell immunity in vaccinated individuals Recent studies have shown that heavy mutations in the spike protein of the SARS CoV 2 omicron and deltacron variants have resulted in their ability to evade spike specific neutralizing antibodies however their effect on cellular immunity including cross reactive T cells generated by vaccination or natural infection is less clear Detailed studies linking humoral and cellular immunity to the COVID 19 outcome will be useful for uncovering prognostic biomarkers and developing future vaccines We welcome research papers on immune system involvement in COVID 19 including but not limited to the following topics The role of immune cells and cytokines in COVID 19 Immune biomarkers for COVID 19

medical knowledge with the flexibility required for customization to the individual patient Developing innovative approaches to design and build evidence based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources Parallel challenges arise in the organization of research at the biological and clinical levels where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities
