Camarinha-Matos, 2002-04-30 Towards collaborative business ecosystems Last decade was fertile in the emerging of new collaboration mechanisms and forms of dynamic virtual organizations leading to the concept of dynamic business ecosystem which is supported or induced by the progress of the ubiquitous I pervasive computing and networking The new technologies

collaborative business models and organizational forms supported by networking tools invade all traditional businesses and organizations what requires thinking in terms of whole systems i.e. seeing each business as part of a wider economic ecosystem and environment. It is also becoming evident that the agile formation of very dynamic virtual organizations depends on the existence of a proper longer term embedding or nesting environment e.g. regional industry cluster in order to guarantee certain basic requirements such as trust building. Trusting your partner is a gradual and long process common interoperability ontology and distributed collaboration infrastructures agreed business practices requiring substantial engineering. I.e. engineering efforts a sense of community we vs the others and some sense of stability when is a dynamic state or a stationary state useful. The more frequent situation is the case in which this nesting environment is formed by organizations located in a common region although geography is not a major facet when cooperation is supported by computer networks.
