Clinical metagenomics-based diagnostics for infectious diseases Sathyavathi Sundararaju,Arun Prasath Lakshmanan,Pushpanathan Muthuirulan ,Jeyaprakash Rajendhran,2024-08-20 Clinical metagenomics is an emerging method in the diagnosis of infectious diseases that uses next generation sequencing NGS technology to identify the etiologic agents to allow for more effective and targeted treatment of infectious diseases Conventional diagnostic methods are mainly based on basic morphologic phenotypic and genotypic analyses which can be insensitive and or time consuming Metagenomic NGS mNGS can be performed with only a small amount of nucleic acid from the specimen and not only can the pathogen be identified and characterized but also its antimicrobial susceptibility can be inferred Although tremendous advancements were made in the speed throughput and cost of NGS in recent years the application of clinical metagenomics in routine diagnosis of infectious diseases is not yet practical because of its much higher cost compared to conventional microbiological tests complex laboratory workflows and computational challenges
