

**Workshop:
Multiply and Divide Fractions**

Fern's Mistake
Fern and Maria are talking about multiplying and dividing fractions.

1. Understand What You're Asked to Do
Fern explains, "I thought about the denominator in the same way as I did when I added or subtracted fractions. I found a common denominator, 12. Then instead of adding or subtracting, I multiplied the numerators."
1. Talk with a partner: What did Fern do incorrectly in the problem below?
$$\frac{1}{2} \times \frac{2}{3} = \frac{2}{6} = \frac{1}{3}$$

Compare Addition and Multiplication
Maria uses fraction circle pieces to model $\frac{1}{2} + \frac{1}{3}$.

2. Solve the Problem
When you are adding, you are counting parts of a whole, so those parts have to be the same size, like twelfths. But when you multiply, you are finding a part of a part, so the part-whole changes size." Maria explains.

✓ Self-Check: Questions 2–4
2. A. Use fraction circle pieces, a rectangle, or number line to model and solve $\frac{1}{2} \times \frac{2}{3}$.
B. Write your answer in simplest form. How do you know this is in simplest form?

Estimate and Check for Reasonableness
"When I computed with whole numbers, I always thought that multiplication made the answer bigger and division made the answer smaller. But that is not always true when I multiply and divide fractions." Maria says.

Fern replies, "I always estimate the product or the quotient so I can tell whether or not my answer is reasonable. Drawing a picture helps, too."

2. A. Estimate the answer to $5 \div \frac{1}{3}$. Should the quotient be greater or less than 5?
B. Draw a picture and solve the problem.
C. How do you know if your answer is reasonable?

Know the Problem and Use Labels
"Sometimes I calculate correctly, but I use the wrong label in my answer," admits Fern.

3. Read the problem below carefully. Think about what the question is asking you to find and what answer you are using the problem. Use a label to show what the numbers in your answer mean.
There is $\frac{1}{3}$ of a bag of beads. How can 3 children split the beads equally?

4. Solve the Problem
Use the Self-Check Questions in the Student Guide and the Workshop Menu on the First Fraction Products and Quotients pages in the Student Activity Book to help you choose practice multiplying and dividing fractions.

Questions 1–4

1. Possible response: Fern did not need to find common denominators. She could have just multiplied the numerators and multiplied the denominators.

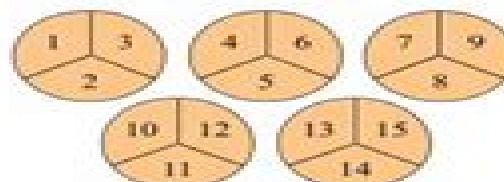

2. A. $\frac{1}{2} \times \frac{2}{3} = \frac{2}{6} = \frac{1}{3}$

- B. $\frac{1}{3} = \frac{4}{12}$; Possible response: I know my answer is in simplest form because I used the fewest yellow circle pieces. 3 black twelfths was not the simplest form because I used 3 pieces. I could trade them for 1 yellow.

3. A. Possible response: The quotient for $5 \div \frac{1}{3}$ should be greater than 5. I think a lot of thirds will be in 5.

- B. $5 \div \frac{1}{3} = 15$; Drawings will vary. Sample drawing:

- C. My quotient, 15, is greater than 5 so it is reasonable. I expected a lot of thirds to be in 5.

4. $\frac{1}{3} \div 3 = \frac{1}{9}$ bag of beads for each child;
