*GIS Cartography* Gretchen N. Peterson, 2020-11-24 Since the publication of the bestselling second edition 5 years ago vast and new globally relevant geographic datasets have become available to cartography practitioners and with this has come the need for new ways to visualize them in maps as well as new challenges in ethically disseminating the visualizations With new features and significant updates that address these changes this edition remains faithful to the original vision that cartography instruction should be software agnostic Discussing map design theory and technique rather than map design tools this book focuses on digital cartography and its best practices This third edition has completely new sections on how to deal with maps that go viral and the ethics therein new presentation ideas new features such as amenities climate data and hazards the new Equal Earth projection and vector tile design considerations All chapters are thoroughly updated with new illustrations and new sections for datasets that didn't exist when the second edition was published as well as new techniques

and trends in cartography New in the third edition A true textbook written with a friendly style and excellent examples explaining everything from layout design to fonts and colors to specific design considerations for individual feature types to static and dynamic cartography issues Thoroughly updated with new features such as points of interest climate data hazards and buildings new projections such as the Equal Earth projection and the Spilhaus projection and vector tile design considerations such as label placement techniques and tricks for making world class basemaps Includes over 70 new map examples that display the latest techniques in cartography Reflects on new developments in color palettes visualization patterns datums and non static output media such as animation interaction and large format cinematic techniques that weren't available for the second edition Defines and illustrates new terms that have made their way into the profession over the last few years such as story maps flow maps Dorling cartograms spec sheets bivariate choropleths firefly cartography Tanaka contours and value by alpha In this third edition author Gretchen Peterson takes a don't let the technology get in the way approach to the presentation focusing on the elements of good design what makes a good map and how to get there rather than specific software tools She provides a reference that you can thumb through time and again as you create your maps Copiously illustrated the third edition explores novel concepts that kick start your pursuit of map making excellence The book doesn't just teach you how to design and create good maps it teaches you how to design and create superior maps

*Designed Maps* Cynthia A. Brewer, 2008 This sequel to the highly successful *Designing Maps* offers a graphics intensive presentation of published maps providing cartographic examples that GIS users can then adapt for their own needs Each chapter characterizes a common design decision and includes a demonstration map which is annotated with specific information needed to reproduce the design such as text fonts sizes and styles line weights colors and patterns marker symbol fonts sizes and colors and fill colors and patterns Visual hierarchies and the purpose of each map are considered with the audience in mind drawing a clear connection between intent and design The book also includes a valuable task index that explains what ArcGIS 9 tools to use for desired cartographic effects From experienced cartographers to those who make GIS maps only occasionally all GIS users will find this book to be an indispensable resource **GIS Cartography** Gretchen N. Peterson, 2009-04-06 Maps either printed or digital can create effective communication with bosses clients other scientists and the public However entry level GISers often find that map design was given short shrift in their pre professional life It is time for the GIS field which is maturing in other ways to improve its skills in this area Based on the auth **Principles of Map Design** Judith A. Tyner, 2017-09-12 This authoritative reader friendly text presents core principles of good map design that apply regardless of production methods or technical approach The book addresses the crucial questions that arise at each step of making a map Who is the audience What is the purpose of the map Where and how will it be used Students get the knowledge needed to make sound decisions about data typography color projections scale symbols and nontraditional mapping and advanced visualization techniques Pedagogical Features Over 200 illustrations also available at the companion
