Cryopreservation of Fish Gametes Judith Betsy, Stephen Kumar, 2020-06-27 Understanding the reproductive physiology and endocrinology of fishes is essential for captive maturation and seed production in the field of aquaculture Studying the spermatology of fishes is a comparatively new focus in aquaculture which has emerged as an important area of fish research over the past two decades In this regard the cryopreservation of fish gametes is a crucial aspect Moreover

energetics studies of gametes have become essential considering the loss of vigour in the spermatozoa after cryopreservation. The latest development in this context is the cryopreservation of spermatogonial stem cell which is also covered in the book along with detailed information on embryo cryopreservation in fishes and crustaceans. The role of cryopreservation in conservation programmes is another important aspect one that will especially interest biologists. This book addresses central issues in fish gamete cryopreservation and breeding while also reviewing the history of cryopreservation. Its most unique feature is the breadth of its coverage from basic information on reproduction in fishes to such advanced topics as embryo cryopreservation. Chiefly intended as a handy troubleshooting guide, the book represents a valuable resource for research students in related fields.
