Schleiss, 2011-05-10 Labyrinth spillways are almost as old as dam engineering In spite of the fact that they appear as a very good technical economical compromise only 0 1% of large dams are equipped with such weirs The main reason for this is that traditional labyrinth weirs usually cannot be installed on top of concrete gravity dams as they require a large foundation

considered unusual exceptional to the rule and out of the ordinary and therefore not for general study However it is now becoming clear that taken together these phenomena represent a class of regulatory mechanisms that are widespread as well as exceptionally powerful

Water for Food Security Claudia Ringler, Arif Anwar, 2016-03-22 Pakistan's water management is at a critical watershed The world's seventh most populous country faces serious challenges that will require improvements in both the hardware and software of agricultural water management Water shortages are growing rapidly as a result of growing demand across all water using sectors Rapid population growth from 175 million people in 2010 to an estimated 236 million by 2030 and 280 million by 2050 and international food price spikes create pressure to increase agricultural production of staples but demand for cash crops is also growing rapidly including for cotton fruit trees and tobacco to raise rural incomes and generate rural employment to absorb the relatively young rapidly growing rural population Water management is also increasingly affected by climate change including an increased number of flood and drought events and growing energy shortages which affect how water is being sourced and used Last but not least Pakistan's political situation is fragile which has reduced incentives to invest in enhanced agricultural water and other technologies How Pakistan addresses these challenges will be decisive for its population's future water and food security for economic growth and for environmental sustainability It will also affect water and food outcomes globally due to the interconnectedness of global food trade This book was published as a special issue of Water International

Self-Eating on Demand: Autophagy in Cancer and Cancer Therapy Patrizia Agostinis, Jon D. Lane, 2018-02-19

Macroautophagy the major lysosomal pathway for recycling intracellular components including whole organelles has emerged as a key process modulating tumorigenesis tumor stroma interactions and cancer therapy An impressive number of studies over the past decade have unraveled the plastic role of autophagy during tumor development and dissemination The discoveries that autophagy may either support or repress neoplastic growth and contextually favor or weaken resistance and impact antitumor immunity have spurred efforts from many laboratories trying to conceptualize the complex role of autophagy in cancer using cellular and preclinical models This complexity is further accentuated by recent findings highlighting that various autophagy related genes have roles beyond this catabolic mechanism and interface with oncogenic

pathways other trafficking and degradation mechanisms and the cell death machinery From a therapeutic perspective knowledge of how autophagy modulates the tumor microenvironment is crucial to devise autophagy targeting strategies using smart combination of drugs or anticancer modalities This eBook contains a collection of reviews by autophagy researchers and provides a background to the state of the art in the field of autophagy in cancer focusing on various aspects of autophagy regulation ranging from its molecular components to its cell autonomous role e g in cell division and oncogenesis miRNAs regulation cross talk with cell death pathways as well as cell non autonomous role e g in secretion interface with tumor stroma and clinical prospects of autophagy based biomarkers and autophagy modulators in anticancer therapy This eBook is part of the TransAutophagy initiative to better understand the clinical implications of autophagy in cancer
