Ports and the Environment Meifeng Luo, Tsz Leung Yip, 2017-10-02 Ports are a vital part of the global economy connecting the world through maritime transport networks promoting international trade and supporting global economic growth However port communities are increasingly concerned about the local environmental problems associated with air pollution from increased port activities Efforts are increasingly being made into the reduction of human induced

changes to the global environment and one of the target areas is to reduce air emissions from international shipping. It appears that management of the port sector has entered into a new era not only because environmental concerns are increasingly being expressed surrounding the ports themselves but also because many of the new environmental measures associated with the shipping trade have to be enforced when ships are in port. Ports and the Environment assembles research focusing on the management of ports and the environmental issues associated with both the shipping trade and the ports themselves. By examining contemporary concerns from the perspectives of maritime policy, port management and industrial efficiency, this book will provide important reference for future research and policy making in this area. This book was originally published as a special issue of Maritime Policy Management.

Gridlock Randal O'Toole, 2010-01-18 America is the most mobile society in history but our transportation system is on the verge of collapse. Traffic congestion is today five times greater than it was 25 years ago yet many transportation plans and projects are making it worse. As Randal O'Toole reveals in *Gridlock*, the prime causes of our ailing system are a government transportation planning philosophy whose primary goal is to diminish auto use, hence personal mobility, in combination with federal budget incentives that perversely encourage transportation planners to increase congestion. As a result, the automobile, which is accessible to almost every family in the nation and provides unparalleled access to better housing, low cost consumer goods, a choice, driven, affordable life, and freedom, is being deliberately forced off the transportation grid by the expensive solution of little-used high speed trains and urban transit lines. *Gridlock* presents a wide range of innovative ideas and policy recommendations for creating an effective transportation system improvements that will increase our mobility and pay for themselves, whether it's cars, buses, planes, or trains. At the center of O'Toole's solutions are three core principles: those who use transportation facilities should pay for them; negative effects should be dealt with in a cost-efficient manner; and new technologies that will increase mobility at a low cost must be embraced. In *Gridlock*, Randal O'Toole brings energetic and unconventional thinking to transportation strategies that have until now only driven us into the breakdown lane.
