**Urban Water II** S. Mambretti, C. A. Brebbia, 2014-05-27 Urban Water II is the proceedings of the 2nd International Conference on the Design Construction Maintenance Monitoring and Control of Urban Water Systems The meeting was reconvened following the success of the first conference held in the New Forest home to the Wessex

Institute of Technology in 2012 Water systems in the urban environment consist of supply networks as well as sewage and storm drainage systems They interact with each other and with warm bodies such as rivers lakes and aquifers and this interaction affects the quality and quantity of the different systems As our cities continue to expand their urban infrastructure must be re evaluated and adapted to new requirements related to the increase in population and the growing areas under urbanisation New water systems are also required to reduce the risk associated with floods network failures and many others related to inadequate networks New systems should reduce economic losses and environmental impacts as well as promote a higher degree of reliability Improved management measurement and control mechanisms are needed to ensure the efficiency and safety of urban water systems Topics such as contamination and pollution discharges in urban water bodies as well as the monitoring of water recycling systems are currently receiving a great deal of attention from researchers and professional engineers working in the water industry Architects and town planners are also aware of the importance of the interaction between urban water cycles and city planning and landscaping Management of all these aspects requires the development of specialised computer tools that can respond to the increased complexity of urban water systems Relating to the subject areas of Water supply networks and Urban Drainage topics covered include Leakage and losses Modelling and experimentation Safety and security of water systems Maintenance and repairs Water quality Water savings and reuse Surface water and groundwater sources Reservoirs Network design Waste water treatment and disposal Structural works and infrastructure Water quality issues Combined sewer networks Flood control Storage tanks Environmental impact Domestic and industrial waste water issues

Dinesh Kumar,Cecilia Tortajada,2020-01-31 This book highlights the institutional legal and policy measures to manage water pollution in India and discusses how effective they have been in improving the overall quality of the country s surface and groundwater resources It also reviews the status of wastewater generation collection and treatment in urban areas to provide insights into the gaps in wastewater treatment Further it offers a detailed analysis of the wastewater treatment systems available and examines the human health impacts of water pollution in the country as well as the future trajectory of investment in wastewater treatment systems and potential sectors for reuse and recycling of wastewater briefly assessing the market demand for treated wastewater Lastly it investigates the factors influencing the environmental sustainability and economic viability of wastewater treatment as well as future areas of research in the field Flood Risk and Social Justice Zoran Vojinovic,Michael B. Abbott,2012-03-05 Flood Risk and Social Justice is a response to the rising significance of floods and flood related disasters worldwide as an initiative to promote a socially just approach to the problems of flood risk It integrates the human social and the technological components to provide a holistic view This book treats flooding as a multi dimensional human and natural world tragedy that must be accommodated using all the social and technological means that can be mobilised before during and after the flooding event It covers socially just flood risk mitigation practices which necessitate a wide range of multidisciplinary approaches starting from social and wider environmental needs including feedback cycles between human needs and technological means Flood Risk and Social Justice looks at how to judge whether a risk is acceptable or not by addressing an understanding of social and phenomenological considerations rather than simple calculations of probabilities multiplied by unwanted outcomes and their balancing between costs and benefits It is argued that the present flood management practice should be largely replaced by the social justice approach where particular attention is given to deciding what is the right thing to do within a much wider context Thus it insists upon the validity of modes of human understanding which cannot be addressed within the limited context of modern science Flood Risk and Social Justice is written to support a wide range of audiences and seeks to improve the dialogue between researchers and practitioners from different disciplines including post graduate engineering environmental and social science students industry practitioners academics planners environmental advocacy groups and environmental law professionals who have a strong interest in a new kind of social justice work that can act as a continuous counter balance to the various mechanisms that unceasingly give rise to profound injustices More information about this
