Specialty Crops for Climate Change Adaptation Chandrasekar Vuppapapati,2023-10-14 Specialty crops are defined as fruits and vegetables tree nuts dried fruits horticulture and nursery crops including floriculture The value of specialty crop production in the United States

accounted for 18.44 % of the 433.569 billion in agriculture cash receipts collected in 2021. In 2020 that ratio was 21.47% of the 363.464 billion. Specialty crops are gaining increasing attention across nation as demonstrated in the 2018 Farm Bill Agricultural Act of the 2018 Farm Bill P L 115 334 with the increased number of provisions addressing specialty crop issues reflecting their growing role in the global economy. The cultivation of Specialty crops nevertheless has its own challenges. Specialty crops are generally more sensitive to climatic stressors and require more comprehensive management compared to traditional row crops. Specialty crops face significant financial risks threatening US 1.6 Trillion global market due to their higher water demand. The mission of the book is to prepare current and future software engineering teams, agriculture students, economists, macroeconomists with the skills and tools to fully utilize advanced data science, artificial intelligence, climate patterns and economic models to develop software capabilities that help to achieve Specialty crops and economic sustainability through improved productivity for years to come and ensure enough food for the future of the planet and generations to come. Improving the Delivery of Pre-exposure Prophylaxis (PrEP) to Eliminate Vertical HIV Transmission Dvora Joseph Davey, Benjamin Chi, Irene Njuguna, Jillian Pintye, Friday Saidi, 2024-10-30. Over half of HIV infections globally occur among cisgender women. High HIV incidence among young ie 15-30 years old African cisgender women persists during pregnancy and postpartum and there is evidence that HIV acquisition risk more than doubles during this period. A new HIV infection has important short and long term consequences for the mother's health. Acute maternal HIV infection is also associated with increased vertical transmission risk making prevention of HIV among pregnant and breastfeeding populations a global health priority. As access to antiretroviral therapy continues to expand, new and often undiagnosed maternal HIV infections during pregnancy and breastfeeding contribute to a growing proportion of new pediatric HIV cases and urgent focus of interventions to eliminate vertical HIV transmission. To address this important gap, The World Health Organization (WHO) and several national HIV programs recommend offering pre-exposure prophylaxis (PrEP) to pregnant and breastfeeding populations at substantial risk for HIV. To fully realize the promise of PrEP in antenatal and postnatal settings, however, real-world clinical and implementation data are urgently needed. Further, there is a need for research on novel long-acting tools that prevent HIV acquisition in all populations including pregnant and breastfeeding populations. **ERDA Energy Research Abstracts** United States.
