introduction to the fundamental contributions of Pythagoras to the establishment of European culture To penetrate the intricate maze of lore and ascertain what history can tell us about the philosopher Riedweg not only examines the written record but also considers Pythagoras within the cultural intellectual and spiritual context of his times The result is a vivid overview of the life and teachings of a crucial Greek thinker and his most important followers **Four Colors Suffice** Robin Wilson,2021-10-12 On October 23 1852 Professor Augustus De Morgan wrote a letter to a colleague unaware that he was launching one of the most famous mathematical conundrums in history one that would confound thousands of puzzlers for more than a century This is the amazing story of how the map problem was solved The problem posed in the letter came from a former student What is the least possible number of colors needed to fill in any map real or invented so that neighboring counties are always colored differently This deceptively simple question was of minimal interest to cartographers who saw little need to limit how many colors they used But the problem set off a frenzy among professional mathematicians and amateur problem solvers among them Lewis Carroll an astronomer a botanist an obsessive golfer the Bishop of London a man who set his watch only once a year a California traffic cop and a bridegroom who spent his honeymoon coloring maps In their pursuit of the solution mathematicians painted maps on doughnuts and horseshoes and played with patterned soccer balls and the great rhombicuboctahedron It would be more than one hundred years and countless colored maps later before the result was finally established Even then difficult questions remained and the intricate solution which involved no fewer than 1 200 hours of computer time was greeted with as much dismay as enthusiasm Providing a clear and elegant explanation of the problem and the proof Robin Wilson tells how a seemingly innocuous question baffled great minds and stimulated exciting mathematics with far flung applications This is the entertaining story of those who failed to prove and those who ultimately did prove that four colors do indeed suffice to color any map This new edition features many color illustrations It also includes a new foreword by Ian Stewart on the importance of the map problem and how it was solved

Cosmic-Chemical Bond David A Williams, Thomas W Hartquist, 2015-10-09 Introducing astrochemistry to a wide audience this book describes how molecules formed in chemical reactions occur in a range of environments in interstellar and circumstellar space from shortly after the Big Bang up to the present epoch Stressing that chemistry in these environments needs to be driven it helps identify these drivers and the various chemical networks that operate giving rise to signature molecules that enable the physics of the region to be better understood The book emphasises in a non mathematical way the chemistry of the Milky Way Galaxy and its planet forming regions describes how other galaxies may have rather different chemistries and shows how chemistry was important even in the Early Universe when most of the elements had yet to be formed This book will appeal to anyone with a general interest in chemistry from students to professional scientists working in interdisciplinary areas and non scientists fascinated by the evolving and exciting story of chemistry in the cosmos
