Wambugu,2019-08-30 Understand how machine learning works and get hands on experience of using R to build algorithms that can solve various real world problems Key FeaturesGain a comprehensive overview of different machine learning techniquesExplore various methods for selecting a particular algorithmImplement a machine learning project from problem definition through to the final modelBook Description With huge amounts of data being generated every moment businesses need applications that apply complex mathematical calculations to data repeatedly and at speed With machine learning techniques and R you can easily develop these kinds of applications in an efficient way Practical Machine Learning with R begins by helping you grasp the basics of machine learning methods while also highlighting how and why they work You will understand how to get these algorithms to work in practice rather than focusing on mathematical derivations As you progress from one chapter to another you will gain hands on experience of building a machine learning solution in R Next using R packages such as rpart random forest and multiple imputation by chained equations MICE you will learn to implement algorithms including neural net classifier decision trees and linear and non linear regression As you progress

through the book you will delve into various machine learning techniques for both supervised and unsupervised learning approaches. In addition to this you will gain insights into partitioning the datasets and mechanisms to evaluate the results from each model and be able to compare them. By the end of this book you will have gained expertise in solving your business problems starting by forming a good problem statement, selecting the most appropriate model to solve your problem and then ensuring that you do not overtrain it. What you will learn:

- Define a problem that can be solved by training a machine learning model.
- Obtain, verify and clean data before transforming it into the correct format for use.
- Perform exploratory analysis and extract features from data.
- Build models for neural net, linear and non linear regression, classification and clustering.
- Evaluate the performance of a model with the right metrics.
- Implement a classification problem using the neural net package.
- Employ a decision tree using the random forest library.

Who this book is for: If you are a data analyst, data scientist or a business analyst who wants to understand the process of machine learning and apply it to a real dataset using R, this book is just what you need. Data scientists who use Python and want to implement their machine learning solutions using R will also find this book very useful. The book will also enable novice programmers to start their journey in data science. Basic knowledge of any programming language is all you need to get started.
