## **Windows 7 Deployment Guide:**

The Windows 7 Small Business Deployment Guide for Business Owners and IT Professionals Onuora Amobi, Emmanuel Arinze, 2010-09 Migrating to Windows 7 is one of the most important decisions you'll make for your business. Understanding the ins and outs of a successful Windows 7 deployment will help you and your IT department save time, save money, and most importantly, improve your overall business productivity. With the cost of deploying Windows 7 from Windows XP being upwards of \$1,035 per licensed user (Source: Gartner), you just can't afford to make mistakes. So you're left with two options: One, take time away from your business or your IT maintenance to read up on five, ten, maybe 20 white papers to get all the information you need and try to map out a plan yourself; Two, hire an expensive consultant to fully evaluate your business, the pros and cons of Windows 7 deployment, and whether or not your current infrastructure can handle the upgrade. If you aren't a part of a huge corporation, chances are good that you just don't have a lot of time and money to spare for the information gathering process, which means that you have to find another option in order to make Windows 7 work for you. Thankfully, there is a better way to get the information that you need in order to plan your Windows 7 deployment. We've created a comprehensive guide that analyzes the pros and cons of Windows 7, including the new features that you can expect if you are migrating from Vista or XP. It's absolutely the best option for small businesses and IT professionals who are looking to deploy Windows 7, especially when compared to the alternatives. You won't waste time looking for information, and you won't need to spend thousands of dollars on an expensive consultant in order to get REAL answers for your company's Windows 7 deployment.

Mastering Windows 7 Deployment Aidan Finn, Darril Gibson, Kenneth van Surksom, 2011-03-08 Get professional level instruction on Windows 7 deployment tools. Enterprise level operating system deployment is challenging and requires knowledge of specific tools. It is expected that Windows 7 will be extensively deployed in businesses worldwide. This comprehensive Sybex guide provides thorough coverage of the Microsoft deployment tools that were specifically created for Windows 7, preparing system administrators, MIS professionals, and corporate programmers to tackle the task effectively. Companies worldwide are expected to deploy Windows 7 as their enterprise operating system. System administrators and IT professionals need comprehensive instruction on Microsoft's deployment tools. This complete guide provides clear, step-by-step instruction on planning, installing, configuring, deploying, and troubleshooting deployment methods for each tool. Covers the Microsoft Assessment and Planning (MAP) Toolkit, Application Compatibility Toolkit (ACT), Windows PE, Windows Automated Installation Kit (WAIK), Windows System Image Manager (WSIM), Easy Transfer, User State Migration Toolkit (USMT), Windows Deployment Services, Microsoft Deployment Toolkit 2010, System Center Configuration Manager, Key Management Service, and Volume Activation Management Tool (VAMT). Daniel, Polze, Andreas, 2014 In today's life embedded systems are ubiquitous But they differ from traditional desktop systems in many aspects these include predictable timing behavior real time the management of scarce resources memory network reliable communication protocols energy management special purpose user interfaces headless operation system configuration programming languages to support software hardware co design and modeling techniques Within this technical report authors present results from the lecture Operating Systems for Embedded Computing that has been offered by the Operating Systems and Middleware group at HPI in Winter term 2013/14 Focus of the lecture and accompanying projects was on principles of real time computing Students had the chance to gather practical experience with a number of different OSes and applications and present experiences with near hardware programming Projects address the entire spectrum from bare metal programming to harnessing a real time OS to exercising the full software hardware co design cycle Three outstanding projects are at the heart of this technical report Project 1 focuses on the development of a bare metal operating system for LEGO Mindstorms EV3 While still a toy it comes with a powerful ARM processor 64 MB of main memory standard interfaces such as Bluetooth and network protocol stacks EV3 runs a version of 1.1 Introduction Linux Sources are available from Lego's web site However many devices and their driver software are proprietary and not well documented Developing a new bare metal OS for the EV3 requires an understanding of the EV3 boot process Since no standard input output devices are available initial debugging steps are tedious After managing these initial steps the project was able to adapt device drivers for a few Lego devices to an extent that a demonstrator the Segway application could be successfully run on the new OS Project 2 looks at the EV3 from a different angle The EV3 is running a pretty decent version of Linux in principle the RT\_PREEMPT patch can turn any Linux system into a real time OS by modifying the behavior of a number of synchronization constructs at the heart of the OS Priority inversion is a problem that is solved by protocols such as priority inheritance or priority ceiling Real time OSes implement at least one of the protocols The central idea of the project was the comparison of non real time and real time variants of Linux on the EV3 hardware A task set that showed effects of priority inversion on standard EV3 Linux would operate flawlessly on the Linux version with the RT\_PREEMPT patch applied If only patching Lego's version of Linux was that easy Project 3 takes the notion of real time computing more seriously The application scenario was centered around our Carrera Digital 132 racetrack Obtaining position information from the track controlling individual cars detecting and modifying the Carrera Digital protocol required design and implementation of custom controller hardware What to implement in hardware firmware and what to implement in application software this was the central question addressed by the project
