Calorimetric Determination of Constant-pressure Specific Heats of Carbon Dioxide at Elevated Pressures and Temperatures Virgil E. Schrock, 1952 The constant pressure specific heat of carbon dioxide has been measured over the range of temperatures and pressures from ambient conditions to 1000 pounds per square inch gage and 1000 degrees F using a steady flow calorimeter operated on an open cycle It appears that the apparatus as used in this determination will yield values with a probable error of 0.5 percent at the highest temperature level considered The results of these tests check the widely accepted spectroscopic data within 1 percent The values at elevated pressure are in reasonable agreement with those derived from the zero pressure spectroscopic values and the application of the Beattie Bridgeman equation of state Only very limited calorimetric data are available in the literature but substantial agreement exists with those considered reliable
