**Applied Mathematics, Modeling and Computer Simulation** C.-H. Chen, 2022-02-25 The pervasiveness of computers in every field of science industry and everyday life has meant that applied mathematics particularly in relation to modeling and simulation has become ever more important in recent years This book presents the proceedings of the 2021 International Conference on Applied Mathematics Modeling and Computer Simulation AMMCS 2021 hosted in Wuhan China and held as a virtual event from 13 to 14 November 2021 The aim of the conference is to foster the knowledge and understanding of recent advances across the broad fields of applied mathematics modeling and computer simulation and it provides an annual platform for scholars and researchers to communicate important recent developments in their areas of specialization to colleagues and other scientists in related disciplines This year more than 150 participants were able to exchange knowledge and discuss recent developments via the conference The book contains 115 peer reviewed papers selected from more than 250 submissions and ranging from the theoretical and conceptual to the strongly pragmatic and all addressing industrial best practice Topics covered include mathematical modeling and applications engineering applications and scientific computations and the simulation of intelligent systems Providing an overview of recent development and with a mix of practical experiences and enlightening ideas the book will be of interest to researchers and practitioners everywhere

**Windows on Mathematical Meanings** Richard Noss, Celia Hoyles, 2012-12-06 This book is the culmination of some ten years theoretical and empirical investigation Throughout this period we have come into contact with many who have stimulated our thinking some of whom belong to the community of Mathematics Educators Our membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making Alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education Yet many of them might reject the label of Mathematics Educators This community has historically been clustered around what is now called the Epistemology and Learning Group at the Massachusetts Institute of Technology Their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines Crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens We have sometimes felt that few have tried to span both communities Indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths One reason for writing this book is born of our hope that we might draw together Mathematics Educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other
