Early Childhood Observation

In order to conduct the investigation based on the known Piaget experiments, one child is chosen. For the purpose of confidentiality, the name of this child is changed to Jenny. She is a five-year-old girl, the elder one among her two brothers. There are only two people in this room: the girl herself, and me, an observer and experimenter.

It is the afternoon of Saturday, May 16, 2009. The experiment does not take much time, as the girl demonstrates her interest and desire to communicate with a new person. The very experiment takes about 30 – 40 minutes. Before the experiment, her parents told that she could easy talk with unknown people, but only being in her room; this is why the place for this observation was obvious — Jenny's room.

The first experiment is connected with conservation of volume. Piaget tells a lot about the abilities of children of five and six years and admits that their abilities to conserve are not perfectly developed. "Their thought processes are dominated by the appearances of things, and they do not realize that the volume of an object may not change just because the appearance changes." (Hobart, 155)

Piaget points out that children at this age use rather primitive reasoning to answer any question and are not able to follow and think about the actions other people do. This is why Jenny does not pay attention to the volume of water, compare the forms of the glasses, or concentrate on the level of water; all she does is make conclusion visually.

Jenny sees two absolutely identical glasses of water. I ask her which glass has more water; she surely answers that none, as both of them has the same volume of water. I take another, thinner and taller glass and pour water of one glass to it. The girl smiles and admits that now, there is more water in the thinner glass. I ask her to explain why she thinks so; her answer is rather clear, because the second glass is taller.

The second experiment lies in conservation of mass. I present two equal balls of clay and ask her whether they are of the same shape. The girl touches both of them in order to play a bit and puts them on the table. In several seconds, she admits that they are of the same size.
