Keough, Susan J. Sain, Carolyn L. Roller, 2012 Kinesiology for the Occupational Therapy Assistant Essential Components of Function and Movement approaches the study of kinesiology by connecting function to the underlying components that make movement possible Information is presented in a manner that enhances retention by incorporating applications in occupational therapy With over 18 years of combined teaching experience Jeremy Keough Susan Sain and Carolyn Roller present how aspects of movement enable or hinder function and engagement in daily activities using a top down approach based on the Occupational Therapy Practice Framework Second Edition Benefits and Features Occupational profiles describing actual client conditions at the beginning of several chapters Occupation real life based activities and questions at the end of each chapter Emphasis on function and identification of how and why movement occurs Range of motion and manual muscle testing as well as kinesiological principles now available in one text More than 300 tables and figures throughout the chapters Call out boxes that highlight and clarify key concepts A seamless integration of theory fact and practice Glossary of terms Web resources and range of motion norms Instructors will benefit from ancillary PowerPoint presentations Instructors in educational settings can visit www.efacultylounge.com for additional materials to be used for teaching in the classroom Kinesiology for the Occupational Therapy Assistant Essential Components of Function and Movement provides occupational therapy assistant students with thorough explanations and learning activities that will put kinesiology into context Students will also gain insight into the practice of occupational therapy through directed questions and problem solving to assist the client in achieving movement goals **Locomotion and Posture in Older Adults** Fabio Augusto Barbieri, Rodrigo Vitória, 2017-02-07 This book is an attempt to advance the discussion and improve our understanding about the effects of aging and movement disorders on motor control during walking and postural tasks Despite these activities are performed daily there is a high requirement of motor and neural systems in order to perform both tasks efficiently Both walking and posture require a complex interaction of musculoskeletal and neural systems However the mechanisms used to control these tasks as well as how they are planned and coordinated are still a question of discussion among health professionals and researchers In addition this discussion is more interesting when the effects of aging are included in the context of locomotion and the postural control The number of older individuals is 841 million in 2015 which is four times higher than the 202 million that lived in 1950 Aging causes many motor sensorial and neural deficits which impair locomotion and postural control in the elderly The severity of this framework is worsened

when the aging goes along with a movement disorder such as Parkinson disease Chorea Dystonia Huntington disease etc Therefore the aim of this book is to highlight the influence of different aspects on planning controlling and performing locomotion and posture tasks In attempting to improve current knowledge in this field invited authors present and discuss how environmental sensorial motor cognitive and individual aspects influence the planning and performance of locomotor and postural activities The major thrust of the book is to address the mechanisms involved in controlling and planning motor action in neurological healthy individuals as well as in those who suffer from movement disorders or face the effects of aging indicating the aspects that impair locomotion and postural control In addition new technologies tools and interventions designed to manage the effects of aging and movement disorders are presented in the book **Willard and Spackman's**
