

## VL260 CONTROL

### Preparation and Filling

Fill the spa to its correct operating level. Be sure to open all valves and jets in the plumbing system before filling to allow as much air as possible to escape from the plumbing and the control system during the filling process. When your spa is first actuated, it will go into Priming mode, indicated by "PR". The Priming mode will last for less than 5 minutes (press "Cool" or "Warm" to skip Priming Mode) and then the spa will begin to heat the spa and maintain the water temperature in the Standard mode.

### Buttons

JETS

Press the "Jets" button once to turn pump on or off, and to shift between low and high speeds if equipped. If left running, the pump will turn off after a timeout period. The pump low speed timeout on some systems may be as long as 4 hours. On non-circ systems, the low speed of pump 1 runs when the blower or any other pump is on. It may also activate for at least 1 minute every 30 minutes to detect the spa temperature (pulsing) and then to heat to the set temperature if needed, depending upon mode. When the low speed turns on automatically, it cannot be deactivated from the panel; however, the high speed may be started.

COOL

WARM - SET TEMPERATURE

The last measured temperature is constantly displayed on the LCD screen.

**Please note that the last measured water temperature only appears exactly when the pump has run at least for 1 minute.**

To display the set temperature, press the Cool button or Warm button once. To change the set temperature, press the button a second time before the LCD stops flashing. Each press of the "Cool" or "Warm" button will continue to either lower or raise the set temperature. After three seconds, the LCD will stop flashing and display the current spa temperature.

LIGHT

Press the "Light" button to turn the light on and off. If left on, the light automatically turns off after 4 hours.

### MODE

Mode is changed by pressing the "Cool" button or "Warm" button, then pressing the "Light" button.

**Standard Mode** is programmed to maintain the desired temperature. Note that the last measured spa temperature displayed is current only when the pump has been running for at least 2 minutes. "St" will be displayed momentarily when you switch into Standard Mode.

**Economy Mode** heats the spa to the set temperature only during filter cycles. "St" will display solid when temperature is not current, and will alternate with temperature when temperature is current.

**Sleep Mode** heats the spa to within 20°F/10°C of the set temperature only during filter cycles. "St" will display solid when temperature is not current, and will alternate with temperature when temperature is current.

### Preset Filter Cycles

The first filter cycle begins 6 minutes after the spa is energized. The second filter cycle begins 12 hours later. Filter duration is programmable for 2, 4, 6, 8 hours or for continuous filtration (indicated by "FC"). The default filter time is 2 hours.

To program, press "Cool" button or "Warm" button, then "Jets" button. Press "Cool" or "Warm" to adjust. Press "Jets" to exit programming.
